"Allstate had a good finish to a strong year despite the costs incurred in the fourth quarter related to Superstorm Sandy," said Thomas J. Wilson, chairman, president and chief executive officer of The Allstate Corporation. "Our strategy of providing differentiated products to four consumer segments while improving returns is working. The Allstate branded business maintained strong auto profitability, dramatically improved returns in homeowners and began to reduce the negative impact on policies in force related to profit improvement actions. Esurance, Encompass and Allstate Financial maintained their growth trajectories by staying focused on targeted customer value propositions. Proactive investment actions resulted in total returns of over 7 percent for the year. Overall premiums increased and net and operating income more than doubled in 2012 versus 2011. As a result, book value per share increased to \$42.39, a 17.2 percent increase for the year," continued Wilson.

"The board's confidence in the execution of this strategy enabled us to raise the cash returned to shareholders. The quarterly dividend was increased by 13.6 percent from the prior quarter's dividend to \$0.25 per share. An additional \$1 billion share repurchase program was also approved, which will be implemented in conjunction with a repurchase program funded with hybrid debt announced in December," concluded Wilson.

Consolidated Financial Results

Net income for 2012 was \$2.31 billion, or \$4.68 per diluted share, compared to \$787 million, or \$1.50 per diluted share in 2011. The increase was primarily due to higher property-liability and Allstate Financial operating income, partially offset by lower net realized capital gains. Total 2012 operating income was \$2.15 billion, or \$4.36 per diluted share, an increase from 2011 of \$1.49 billion, or \$3.09 per diluted share. The increase in operating income was driven primarily by a substantial reduction in catastrophe losses and an improvement in the underlying property-liability combined ratio.

For the fourth quarter of 2012, net income was \$394 million, or \$0.81 per diluted share, compared to \$712 million, or \$1.40 per diluted share in 2011. Operating income was \$289 million, or \$0.59 per diluted share, compared to \$735 million, or \$1.45 per diluted share in the fourth quarter of 2011. Catastrophe losses primarily attributable to Sandy drove the decline in net and operating income for the quarter, partially offset by a 4.0 point improvement in the underlying combined ratio.

Property-Liability Underlying Combined Ratio Finished Better Than the Full-Year Outlook; Progress on Customer-Focused Strategy

In 2012, Allstate continued to execute on its strategy to offer unique products to different customer segments while achieving its priorities of maintaining auto margins, improving homeowners returns and growing insurance premiums. For the year, total property-liability net written premium was \$27.03 billion, an increase of 4.0% over 2011. The increase was primarily the result of our acquisition of Esurance to serve the self-directed customer segment. In the customer segments that prefer local advice and assistance, the Allstate brand increased less than a percent in 2012, while Encompass grew premiums by 5% for the year. Overall unit growth was negative for 2012, reflecting declines in Allstate brand auto and homeowners due to pricing and underwriting actions to improve auto returns in New York and Florida, as well as actions to improve returns in homeowners. The unit decline was partially offset by growth in Esurance, up 30.9%, and Encompass, up 5.6% from year-end 2011. Esurance surpassed \$1 billion in net written premium for 2012.

In 2012, property-liability recorded a combined ratio of 95.5, a 7.9 point improvement from the 2011 combined ratio of 103.4. Results benefited from reduced catastrophe losses and an improved underlying combined ratio compared to 2011. The 2012 underlying combined ratio was 87.2, better than the 88-91 outlook range established at the beginning of the year. The positive effects of rate and underwriting actions exceeding the loss trends in auto and property as well as the favorable effects of milder weather were the primary drivers of this result. Allstate brand standard auto produced an underlying combined ratio of 94.0 compared to 95.3 in 2011. On a recorded basis, the combined ratio for Allstate brand standard auto was 96.1, a 0.4 point increase from 2011, primarily due to losses from Sandy. Allstate brand homeowners had a recorded combined ratio of 88.0 and an underlying combined ratio of 65.1, both significantly improved from 2011 levels. This improvement is the result of profit improvement actions and favorable weather, which reduced claim frequencies below expected levels. Other personal lines, which include Emerging Businesses and Encompass, also achieved margin improvements. Esurance recorded a combined ratio of 119.9 with an underlying combined ratio of 108.2 as we continue to invest in growth while monitoring the profitability of acquired business. Maintaining auto profitability and improving homeowners returns remain priorities in 2013.

In the fourth quarter, total net written premium of \$6.64 billion grew 3.3% compared to prior year. In the consumer segment served by the Allstate brand, total net premium written grew 1.9% over the fourth quarter of 2011, with standard auto and homeowners increasing 1.6% and 3.4% compared to prior year, respectively, on the strength of higher average premiums and a 4.6% increase in Emerging Businesses. Net written premium for Encompass, which serves consumers who desire advice but are less brand-focused, increased 8.2% in the quarter on stronger sales of package policies. In the self-directed consumer segment, Esurance posted an approximate 30% increase over Q4 2011 on an acquisition date-adjusted basis for net written premium.

The fourth quarter 2012 property-liability underlying combined ratio was 86.7, versus 90.7 in the fourth quarter of 2011, driven by improvements in auto and homeowners. The fourth quarter 2012 recorded combined ratio was 101.7 and included 10 catastrophe events estimated to cost \$1.16 billion, offset by favorable reserve reestimates of prior catastrophe losses worth \$103 million, \$80 million of which were for pre-2012 catastrophe events. The loss estimate for Sandy was updated from an initial estimate of \$1.075 billion to \$1.117 billion. Of the increase, approximately \$22 million was due to higher losses not covered by

our reinsurance programs, with the balance resulting from claim expenses not recoverable under the National Flood Insurance Program, additional reinsurance premiums and Fair Plan assessments.

The underlying property-liability combined ratio is expected to be between 88 and 90 for 2013. This reflects the goal of maintaining auto margins and the improvements in homeowners profitability, while reflecting the adverse impact on claim frequencies from more severe weather.

Allstate Financial Posted Strong Sales of Underwritten Products; Operating Income Increased

Allstate Financial continued with its strategy to grow underwritten products sold through Allstate agencies and Allstate Benefits, further reduce its concentration in spreadbased products and improve returns. In 2012, issued life insurance policies written through Allstate agencies increased 9.3% for the year. Allstate Benefits, the worksite voluntary employee benefits business, had a successful annual enrollment season, with new business written premiums increasing 6.5% for the year. Total premiums and contract charges on underwritten products of \$2.18 billion increased 3.8% compared to 2011. The actions to reduce the spread-based business resulted in a \$3.01 billion decline in contractholder funds to \$39.32 billion at year-end 2012.

Net income for 2012 decreased to \$541 million from \$590 million in 2011 due to after-tax realized capital losses of \$8 million in 2012 compared to gains of \$250 million in 2011, partially offset by a reserve release in 2012 associated with a non-routine valuation adjustment for derivatives embedded in equity-indexed annuities and an increase in operating income to \$529 million. Despite the increase in operating income, higher capital levels resulted in an operating income return on attributed equity of 8.0%, down slightly from 2011 level of 8.3%. Allstate Financial paid \$357 million of dividends and repayments of surplus notes during 2012 to the parent and its affiliates. Further reducing the size and improving returns of the spread-based businesses through operational and financial actions are priorities in 2013.

In the fourth quarter of 2012, premiums and contract charges of \$566 million were slightly less than in the fourth quarter of 2011 as a 4.9% increase in underwritten products was more than offset by a decline in annuities. Operating income in the quarter was \$144 million, a \$14 million increase from the 2011 quarter, due to higher investment spread and lower expenses, partially offset by a decrease in benefit spread. The increase in investment spread was primarily driven by higher income on limited partnership investments, including the 2012 reclassification of equity method limited partnership income from realized capital gains to net investment income, as well as lower crediting rates, partially offset by the impact of the continued reduction in spread-based business in force. The decline in the benefit spread was primarily due to the fourth quarter 2011 impact of a \$38 million pre-tax reserve release associated with a contract modification at Allstate Benefits.

Proactive Investment Decisions Delivered Strong Investment Results

Allstate delivered solid total returns of 7.3% in 2012, driven by increases in fixed income and equity appreciation, and higher limited partnership income. The impact of lower interest income caused by low interest rates and risk mitigation programs partially offset these increases. We maintained our credit exposure but began reducing interest rate risk and shifted a greater mix of our holdings to direct ownership of assets. The interest-rate risk reduction is focused on the property-liability portfolio and entails the sale of long-duration municipal and corporate bonds with reinvestment primarily in shorter duration fixed income securities. This move better positions the portfolio to withstand a rise in interest rates but will negatively impact investment income in 2013.

Allstate's consolidated investment portfolio increased to \$97.28 billion at December 31, 2012 compared to \$95.62 billion at December 31, 2011, as investment returns and operating cash flow more than offset the impact of the managed reduction in Allstate Financial's liabilities. Pre-tax net unrealized capital gains were \$5.55 billion at December 31, 2012 compared to \$2.88 billion at December 31, 2011, resulting from tighter credit spreads, lower interest rates, and higher equity values.

For the fourth quarter of 2012, net investment income totaled \$1.03 billion and the total portfolio yield was 4.7%, higher than both the prior quarter and the fourth quarter of 2011. Excluding limited partnership results, fourth quarter 2012 net investment income increased compared to the prior quarter but was lower than in the fourth quarter of 2011, consistent with the reduction in Allstate Financial's liabilities and lower market yields. Net investment income was \$4.01 billion for 2012, consistent with 2011. Investment income and fixed income portfolio yields will be pressured by reinvestment in the current low interest rate environment, actions to reduce interest rate risk and the reduction in Allstate Financial's liabilities.

Realized capital gains were \$327 million in 2012 compared to \$503 million in 2011 as lower trading gains were only partially offset by a reduction in impairment losses from the prior year. Pre-tax net realized capital gains for the fourth quarter of 2012 were \$204 million compared to pre-tax net realized capital gains of \$86 million for the prior year quarter. Realized capital gains in the fourth quarter 2012 comprise sales related to the interest-rate risk reduction in our property-liability portfolio.

Focus on Capital Management Continues

"Continuing our record of proactive capital management, in 2012 we completed a \$1 billion share repurchase and initiated a \$1 billion share repurchase to be funded with hybrid debt to further optimize our capital structure. In January 2013, we issued \$500 million of 5.10% fixed-to-floating rate subordinated debentures," said Steve Shebik, chief financial officer. "Today the Board took additional actions to improve shareholder value by increasing the quarterly dividend to \$0.25 and authorizing an additional \$1 billion repurchase program expected to be completed by March 2014, bringing the total buyback authorization to \$2.0 billion. We repurchased 4.6 million shares at a cost of \$182 million in the fourth quarter, bringing the total for 2012 to 26.7 million shares repurchased for \$910 million. Allstate's earnings, portfolio valuation growth and these repurchases increased book value per diluted share by 17.2% to \$42.39 at year-end 2012."

Allstate will pay a quarterly dividend of \$0.25 on each outstanding share of the Corporation's common stock, payable in cash on April 1, 2013 to shareholders of record at the close of business on February 28, 2013.

Statutory surplus at December 31, 2012 was an estimated \$17.2 billion for the combined insurance operating companies. Property-liability surplus was an estimated \$13.7 billion, with Allstate Financial companies accounting for the remainder. This compared to combined insurance companies' surplus at September 30, 2012 of \$17.0 billion and December 31, 2011 of \$15.6 billion. Deployable assets at the holding company level totaled \$2.06 billion at year-end 2012.

Definitions of Non-GAAP Measures

We believe that investors' understanding of Allstate's performance is enhanced by our disclosure of the following non-GAAP measures. Our methods for calculating these measures may differ from those used by other companies and therefore comparability may be limited

Operating income (loss) is net income (loss), excluding:

realized capital gains and losses, after-tax, except for periodic settlements and accruals on non-hedge derivative instruments, which are reported with realized capital gains and losses but included in operating income (loss).

- valuation of DAC and deferred sales inducements (DSI), to the extent they resulted from the recognition of certain realized capital gains and losses or valuation changes on embedded derivatives that are not hedged after-tax
- business combination expenses and the amortization of purchased intangible assets, after-tax, gain (loss) on disposition of operations, after-tax, and
- adjustments for other significant non-recurring, infrequent or unusual items, when (a) the nature of the charge or gain is such that it is reasonably unlikely to recur within two years, or (b) there has been no similar charge or gain within the prior two years.

Net income (loss) is the GAAP measure that is most directly comparable to operating income (loss)

We use operating income (loss) as an important measure to evaluate our results of operations. We believe that the measure provides investors with a valuable measure of the company's ongoing performance because it reveals trends in our insurance and financial services business that may be obscured by the net effect of realized capital gains and losses, valuation changes on embedded derivatives that are not hedged, business combination expenses and the amortization of purchased intangible assets, gain (loss) on disposition of operations and adjustments for other significant non-recurring, infreguent or unusual items. Realized decisions and external economic developments such as capital market conditions, the timing of which is unrelated to the insurance underwriting process. Consistent with our intent to protect results or earn additional income, operating income (loss) includes periodic settlements and accruals on certain derivative instruments that are reported in realized capital gains and losses because they do not qualify for hedge accounting or are not designated as hedges for accounting purposes. These instruments are used for economic hedges and to replicate fixed income securities, and by including them in operating income (loss), we are appropriately reflecting their trends in our performance and in a manner consistent with the economically hedged investments, product attributes (e.g. net investment income and interest credited to contractholder funds) or replicated investments. Business combination expenses are excluded because they are non-recurring in nature and the amortization of purchased intangible assets is excluded because it relates to the acquisition purchase price and is not indicative of our underlying insurance business results or trends. Non-recurring items are excluded because, by their nature, they are not indicative of our business or economic trends. Accordingly, operating income (loss) excludes the effect of items that tend to be highly variable from period to period and highlights the results from ongoing operations and the underlying profitability of our business. A byproduct of excluding these items to determine operating income (loss) is the transparency and understanding of their significance to net income variability and profitability while recognizing these or similar items may recur in subsequent periods. Operating income (loss) is used by management along with the other components of net income (loss) to assess our performance. We use adjusted measures of operating income (loss) and operating income (loss) per diluted share in incentive compensation. Therefore, we believe it is useful for investors to evaluate net income (loss), operating income (loss) and their components separately and in the aggregate when reviewing and evaluating our performance. We note that investors, financial analysts, financial and business media organizations and rating agencies utilize operating income (loss) results in their evaluation of our and our industry's financial performance and in their investment decisions, recommendations and communications as it represents a reliable, representative and consistent measurement of the industry and the company and management's performance. We note that the price to earnings multiple commonly used by insurance investors as a forward-looking valuation technique uses operating income (loss) as the denominator. Operating income (loss) should not be considered as a substitute for net income (loss) and does not reflect the overall profitability of our business

9

The following tables reconcile operating income and net income.

Operating income (loss) return on shareholders' equity is a ratio that uses a non-GAAP measure. It is calculated by dividing the rolling 12-month operating income (loss) by the average of shareholders' equity at the beginning and at the end of the 12-months, after excluding the effect of unrealized net capital gains and losses. Return on shareholders' equity is the most directly comparable GAAP measure. We use operating income (loss) as the numerator for the same reasons we use operating income (loss), as discussed above. We use average shareholders' equity excluding the effect of unrealized net capital gains and losses for the denominator as a representation of shareholders' equity primarily attributable to the company's earned and realized business operations because it eliminates the effect of items that are unrealized and vary significantly between periods due to external economic developments such as capital market conditions like changes in equity prices and interest rates, the amount and timing of which are unrelated to the insurance

underwriting process. We use it to supplement our evaluation of net income (loss) and return on shareholders' equity because it excludes the effect of items that tend to be highly variable from period to period. We believe that this measure is useful to investors and that it provides a valuable tool for investors when considered along with net income (loss) return on shareholders' equity because it eliminates the after-tax effects of realized and unrealized net capital gains and losses that can fluctuate significantly from period to period and that are driven by economic developments, the magnitude and timing of which are generally not influenced by management. In addition, it eliminates non-recurring items that are not indicative of our ongoing business or economic trends. A byproduct of excluding the items noted above to determine operating income (loss) return on shareholders' equity from return on shareholders' equity is the transparency and understanding of their significance to return on shareholders' equity and profitability while recognizing these or similar items may recur in subsequent periods. Therefore, we believe it is useful for investors to have operating income (loss) return on shareholders' equity and return on shareholders' equity and profitability when evaluating our performance. We note that investors, financial analysts, financial and business media organizations and rating agencies utilize operating income (loss) return on shareholders' equity results in their evaluation of our and our industry's financial performance and in their investment decisions, recommendations and communications as it represents a reliable, representative and consistent measurement of the industry and the company and management's utilization of capital. Operating income (loss) return on shareholders' equity and does not reflect the overall profitability of our business.

⁽¹⁾ Allstate Financial attributed equity is the sum of equity for Allstate Life Insurance Company, the applicable equity for American Heritage Life Investment Corporation, and the equity for Allstate Bank. Allstate Bank's equity is zero beginning March 31, 2012.

Underwriting income (loss) is calculated as premiums earned, less claims and claims expense ("losses"), amortization of DAC, operating costs and expenses and restructuring and related charges as determined using GAAP. Management uses this measure in its evaluation of the results of operations to analyze the profitability of our Property-Liability insurance operations separately from investment results. It is also an integral component of incentive compensation. It is useful for investors to evaluate the components of income separately and in the aggregate when reviewing performance. Net income (loss) is the most directly comparable GAAP measure. Underwriting income (loss) should not be considered as a substitute for net income (loss) and does not reflect the overall profitability of our business. A reconciliation of Property-Liability underwriting income (loss) is provided in the "Segment Results" page.

Combined ratio excluding the effect of catastrophes, prior year reserve reestimates, business combination expenses and the amortization of purchased intangible assets ("underlying combined ratio") is a non-GAAP ratio, which is computed as the difference between four GAAP operating ratios: the combined ratio, the effect of catastrophes on the combined ratio, the effect of prior year non-catastrophe reserve reestimates on the combined ratio, the effect of business combination expenses and the amortization of purchased intangible assets ("underlying combined ratio") is a non-GAAP ratio, which is computed as the difference between four GAAP operating ratios: the combined ratio, the effect of prior year non-catastrophe reserve reestimates on the combined ratio, the effect of business combination expenses and the amortization of purchased intangible assets on the combined ratio. We believe that this ratio is useful to investors and it is used

by management to reveal the trends in our Property-Liability business that may be obscured by catastrophe losses, prior year reserve reestimates, business combination expenses and the amortization of purchased intangible assets. Catastrophe losses cause our loss trends to vary significantly between periods as a result of their incidence of occurrence and magnitude, and can have a significant impact on the combined ratio. Prior year reserve reestimates are caused by unexpected loss development on historical reserves. Business

combination expenses and the amortization of purchased intangible assets primarily relate to the acquisition purchase price and are not indicative of our underlying insurance business results or trends. We believe it is useful for investors to evaluate these components separately and in the aggregate when reviewing our underwriting performance. We also provide it to facilitate a comparison to our outlook on the underlying combined ratio. The most directly comparable GAAP measure is the combined ratio. The underlying combined ratio should not be considered as a substitute for the combined ratio and does not reflect the overall underwriting profitability of our business.

A reconciliation of the Property-Liability underlying combined ratio to the Property-Liability combined ratio is provided in the following table.

	Three month Decembe		Twelve month Decembe	
	2012	2011	2012	2011
Combined ratio excluding the effect of catastrophes, prior year reserve reestimates, business				
combination expenses and the amortization of purchased intangible assets ("underlying combined				
ratio")	86.7	90.7	87.2	89.3
Effect of catastrophe losses	15.7	1.0	8.8	14.7
Effect of prior year non-catastrophe reserve reestimates	(1.1)	(1.5)	(1.0)	(0.8)
Effect of business combination expenses and the amortization of purchased intangible assets	0.4	0.7	0.5	0.2
Combined ratio	101.7	90.9	95.5	103.4
Effect of prior year catastrophe reserve reestimates	(1.2)	(0.5)	(1.5)	(0.5)

Underwriting margin is calculated as 100% minus the combined ratio.

In this news release, we provide our outlook range on the Property-Liability 2013 underlying combined ratio. A reconciliation of this measure to the combined ratio is not possible on a forward-looking basis because it is not possible to provide a reliable forecast of catastrophes. Future prior year reserve reestimates are expected to be zero because reserves are determined based on our best estimate of ultimate loss reserves as of the reporting date.

A reconciliation of the Allstate brand standard auto underlying combined ratio to the Allstate brand standard auto combined ratio is provided in the following table.

	Three month Decembe		Twelve month December	
	2012	2011	2012	2011

A reconciliation of the Esurance brand underlying combined ratio to the Esurance brand combined ratio is provided in the following table

	Three montl Decemb		Twelve month Decembe	
	2012	2011 ⁽¹⁾	2012	2011 ⁽¹⁾
Underlying combined ratio	107.9	101.0	108.2	101.0
Effect of catastrophe losses	2.3		1.6	
Effect of business combination expenses and the amortization of purchased intangible assets	7.2	20.9	10.1	20.9
Combined ratio	117.4	121.9	119.9	121.9

⁽¹⁾ Represents period from October 7, 2011 to December 31, 2011.

Book value per share, excluding the impact of unrealized net capital gains and losses on fixed income securities, is a ratio that uses a non-GAAP measure. It is calculated by dividing shareholders' equity after excluding the impact of unrealized net capital gains and losses on fixed income securities and related DAC, DSI and life insurance reserves by total shares outstanding plus dilutive potential shares outstanding. We use the trend in book value per share, excluding the impact of unrealized net capital gains and losses on fixed income securities, in conjunction with book value per share to during the impact of unrealized net capital gains and losses on fixed income securities, in conjunction with book value per share to during the impact of unrealized net capital gains and losses on fixed income securities, in conjunction with book value per share to fict between periods. We believe the non-GAAP ratio is useful to investors because it eliminates the effect of items that can fluctuate significantly from period to period and are generally driven by economic developments, primarily capital market conditions, the magnitude and timing of which are generally not influenced by management, and we believe it enhances understanding and comparability of performance by highlighting underlying business activity and profitability drivers. We note that book value per share, excluding the impact of unrealized net capital gains and losses on fixed income securities, is a measure commonly used by insurance investors as a valuation technique. Book value per share is the most directly comparable GAAP measure. Book value per share, excluding the impact of unrealized net capital gains and losses. The following table shows the reconciliation.

This news release contains forward-looking statements about our outlook for the Property-Liability combined ratio excluding the effect of catastrophes, prior year reserve reestimates, business combination expenses, and the amortization of purchased intangible assets for 2013. These statements are subject to the Private Securities Litigation Reform Act of 1995 and are based on management's estimates, assumptions and projections. Actual results may differ materially from those projected based on the risk factors described below.

of insurance in force.

Unanticipated increases in the severity or frequency of standard auto insurance claims may adversely affect our underwriting results. Changes in the severity or frequency of claims may affect the profitability of our Allstate Protection segment. Changes in bodily injury claim severity are driven primarily by inflation in the medical sector of the economy and litigation. Changes in auto physical damage claim severity are driven primarily by inflation in auto repair costs, auto parts prices and used car prices. The short-term level of claim frequency we experience may vary from period to period and may not be sustainable over the longer term. A decline in gas prices, increase in miles driven, and higher unemployment are examples of factors leading to a short-term frequency change. A significant long-term increase in claim frequency could have an adverse effect on our underwriting results.

We undertake no obligation to publicly correct or update any forward-looking statements. This news release contains unaudited financial information.

In accordance with GAAP, the quarter and year-to-date per share amounts are calculated discretely. Therefore, the sum of each quarter may not equal the year-to-date amount. As a result of the net loss for the three-months ended June 30, 2011, weighted average dilutive potential common shares outstanding resulting from 2.1 million stock options and 0.5 million (2)

restricted stock units (non-participating) were not included in the computation of diluted earnings per share in that quarter, since inclusion of these securities would have an anti-dilutive effect.

Net income and operating income reflect a trailing twelve-month period. Average shareholders' equity and average adjusted shareholders' equity are determined using a two-point average, with the beginning and ending shareholders' equity and adjusted shareholders' equity, respectively, for the twelve-month period as data points. (2)

During the fourth quarter of 2008, for traditional life insurance and immediate annuities with life contingencies, an aggregate premium deficiency of \$123 million, pre-tax (\$80 million, after-tax) resulted primarily from an experience study indicating that the annuitants on certain life-contingent contracts are projected to live longer than we anticipated when the contracts were issued, and, to a lesser degree, a reduction in the related investment portfolio yield. The deficiency was recorded through a reduction in deferred acquisition costs. (1) ⁽²⁾ Rounded to the nearest hundred.
 ⁽³⁾ Total Allstate agencies represents exclusive Allstate agencies and financial representatives in the United States and Canada.

(1) Rate changes include changes approved based on our net cost of reinsurance. These rate changes do not reflect initial rates filed for insurance subsidiaries initially writing business. Based on historical premiums written in those states, rate changes approved for the three month and twelve month period ending December 31, 2012 are estimated to total \$304 million and \$950 million, respectively. Rate changes do not include rating plan enhancements, including the introduction of discounts and surcharges, that result in no change in the overall rate level in the state. Rate changes also exclude Canadian operations, (2)

do not include rating plan enhancements, including the introduction of discounts and surcharges, that result in no change in the overall rate level in the state. Rate changes also exclude Canadian operations, specialty auto, and excess and surplus homeowners lines. Impacts of Allstate brand standard auto effective rate changes as a percentage of total countrywide prior year-end premiums written were 0.6%, 1.1%, 0.9%, 0.4%, 1.2% and 1.6% for the three months ended December 31, 2012, September 30, 2012, June 30, 2012, March 31, 2012, December 31, 2011 and September 30, 2011, respectively. Impacts of Allstate brand homeowners effective rate changes as a percentage of total countrywide prior year-end premiums written were 1.0%, 0.7%, 2.0%, 3.6%, 2.6% and 1.1% for the three months ended December 31, 2012, September 30, 2012, June 30, 2012, March 31, 2012, December 31, 2011 and September 30, 2011, respectively. Represents the impact in the states where rate changes were approved during the period as a percentage of total countrywide prior year-end premiums written were 1.0%, 0.7%, 2.0%, 3.6%, 2.6% and 1.1% for the three months ended December 31, 2012, September 30, 2012, June 30, 2012, March 31, 2012, December 31, 2011 and September 30, 2011, respectively. Represents the impact in the states where rate changes were approved during the period as a percentage of total countrywide prior year-end premiums written. Represents the impact in the states where rate changes were approved during the period as a percentage of its respective total prior year-end premiums written in those states. (3)

(4) (5)

(6) Includes Washington, D.C. (7)

(8)

Includes the impact of a 9.9% average rate increase in New York in the third quarter of 2011. Includes the impact of a 8.0% rate increase in Florida and a 1.2% rate increase in New York in the fourth quarter of 2011.

⁽¹⁾ Policies in Force: Policy counts are based on items rather than customers. A multi-car customer would generate multiple item (policy) counts, even if all cars were insured under one policy. Allstate Dealer Services (guaranteed automobile protection and vehicle service products sold primarily through auto dealers) and Partnership Marketing Group (roadside assistance products) statistics are not included in total policies in force since these are not available. Additionally, non-proprietary products offered by Ivantage (insurance agency) and Answer

Energing Businesses policies in force include statistics for Consumer Household (specialty auto products including motorcycle, trailer, motor home and off-road vehicle insurance policies (2)

(3) and specialty property products including renter, landlord, boat, umbrella, manufactured home and condominium insurance policies), Commercial Lines (commercial products for small business owners) and Allstate Roadside Services (roadside assistance products sold by Allstate Motor Club). Membership provides pay on demand access to roadside services. Fees for three months ended December 31, 2012 were \$150 thousand.

⁽¹⁾ Measures and statistics presented for Allstate brand exclude the Company's Canadian operations and specialty auto.

(2) New Issued Applications: Item counts of automobiles or homeowners insurance applications for insurance policies that were issued during the period, regardless of whether the customer was previously insured by another Allstate Protection market segment. Does not include automobiles that are added by existing customers.

(3) Excess and surplus lines are excluded from homeowners new issued applications. All other homeowners statistics include excess and surplus lines.
 (4) Average Premium - Gross Written: Gross premiums written divided by issued item count. Gross premiums written include the impacts from discounts si

- ⁴⁾ Average Premium Gross Written: Gross premiums written divided by issued item count. Gross premiums written include the impacts from discounts, surcharges and ceded reinsurance premiums and exclude the impacts from mid-term premium adjustments and premium refund accruals. Average premiums represent the appropriate policy term for each line, which is 6 months for auto and 12 months for homeowners.
- (5) Average Premium Net Earned: Earned premium divided by average policies in force for the period. Earned premium includes the impacts from mid-term premium adjustments and ceded reinsurance, but does not include impacts of premium refund accruals. Average premiums represent the appropriate policy term for each line, which is 6 months for auto and 12 months for homeowners.
- (6) Renewal ratio: Renewal policies issued during the period, based on contract effective dates, divided by the total policies issued 6 months prior for auto or 12 months prior for homeowners.

⁽¹⁾ Basis of Presentation

This homeowners supplemental information schedule displays financial results for the homeowners business (defined to include standard homeowners, scheduled personal property and other than primary residence lines). Each state in which the Company writes business has been categorized into one of two exposure groupings (Hurricane or Other). Hurricane exposure states are comprised of those states in which hurricanes are the primary catastrophe exposure. However, the catastrophe losses for these states include losses due to other kinds of catastrophes. A catastrophe is defined by Allstate as an event that produces pre-tax losses before reinsurance in excess of \$1 million, and involves multiple first party policyholders, or an event that produces a number of claims in excess of a preset per-event threshold of average claims in a specific area, occurring within a certain amount of time following the event.

⁽²⁾ Hurricane Exposure States

Hurricane exposure states include the following coastal locations: Alabama, Connecticut, Delaware, Florida, Georgia, Louisiana, Maine, Maryland, Massachusetts, Mississippi, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Texas, Virginia and Washington, D.C.

⁽³⁾ Premium Rate Changes

Represents the impact in the states where rate changes were approved during the year as a percentage of total prior year-end premiums written in those states.

Net income (loss)

Life insurance in force, net of reinsurance

\$ 541	\$ 590	\$ 42	\$ (452)	\$ (1,586)
\$ 326,169 (2)	\$ 306,397	\$ 294,149	\$ 281,961	\$ 280,042

⁽¹⁾ During the fourth quarter of 2008, for traditional life insurance and immediate annuities with life contingencies, an aggregate premium deficiency of \$123 million, pre-tax (\$80 million, aftertax) resulted primarily from an experience study indicating that the annuitants on certain life-contingent contracts are projected to live longer than we anticipated when the contracts were issued, and, to a lesser degree, a reduction in the related investment portfolio yield. The deficiency was recorded through a reduction in deferred acquisition costs.

(1)

Net income and operating income reflect a trailing twelve-month period. Allstate Financial attributed equity is the sum of equity for Allstate Life Insurance Company, the applicable equity for American Heritage Life Investment Corporation, and the equity for (2) Allstate Bank. Allstate Bank's equity is zero beginning March 31, 2012.

Average attributed equity and average adjusted attributed equity are determined using a two-point average, with the beginning and ending attributed equity and adjusted attributed equity, respectively, for the twelve-month period as data points.

THE ALLSTATE CORPORATION ALLSTATE FINANCIAL PREMIUMS AND CONTRACT CHARGES

Includes products directly sold through call centers and internet. (1)

(2)

(3) (4)

в

Primarily represents independent master brokerage agencies, and to a lesser extent, specialized brokers. Excludes Allstate Benefits and non-proprietary products. New business written premiums reflect annualized premiums at initial customer enrollment (including new accounts and new employees or policies of existing accounts), reduced by an estimate for certain policies that are expected to lapse. A significant portion of Allstate Benefits's business is seasonally written in the fourth quarter during many clients' annual employee benefits enrollment.

Structured settlement annuities for annuitants with severe injuries or other health impairments which significantly reduced their life expectancy at the time the annuity was issued and group annuity contracts issued

(2) (3)

Structured settlement annuities for annuitants with severe injuries or other health impairments which significantly reduced their life expectancy at the time the annuities for annuitants with severe injuries or other health impairments which significantly reduced their life expectancy at the time the annuities for annuitants with severe injuries or other health impairments which significantly reduced their life expectancy at the time the annuities with and without life contingencies. Total Allstate Financial attributed equity is the sum of equity for Allstate Life Insurance Company, the applicable equity for American Heritage Life Investment Corporation, and the equity for Allstate Bank. Allstate Bank's equity is zero beginning March 31, 2012. Attributed equity is allocated to each product line based on statutory capital adjusted for GAAP reporting differences and the amount of capital held in Allstate Financial may vary from economic capital. The calculation of statutory capital by product incorporates internal factors for invested asset risk, insurance risk (mortality and morbidity), interest rate risk and business risk. Due to the unavailability of final statutory financial statements at the time we release our GAAP financial results, the allocation is derived from average statutory capital over the prior four quarters. Statutory capital is adjusted for appropriate GAAP and statutory reporting differences will result in changes to the allocation of attributed equity to product. (4) (5)

equity to products. Product line operating income includes allocation of income on investments supporting capital. Operating income reflects a trailing twelve-month period.

The comparison of percentages from period to period may be distorted by investment transactions such as sales, purchases and impairment write-downs. Unrealized net capital gains and losses for limited partnership interest represent the Company's share of Equity Method of Accounting ("EMA") limited partnerships' other comprehensive (2)

income. Fair value and amortized cost are not applicable. The insurance reserves adjustment represents the amount by which the reserve balance would increase if the net unrealized gains in the applicable product portfolios were realized and reinvestel at current lower interest rates, resulting in a premium deficiency. Although we evaluate premium deficiencies on the combined performance of our life insurance and immediate annuities with life contingencies, the adjustment primarily relates to structured settlement annuities with life contingencies, in addition to annuity buy-outs and certain payout annuities with life contingencies.

The DAC and DSI adjustment balance represents the amount by which the amortization of DAC and DSI would increase or decrease if the unrealized gains or losses in the respective product portfolios were realized.

(2)

Income from EMA limited partnerships is reported in net investment income in 2012 and realized capital gains and losses in 2011. Pre-tax yields are calculated as annualized investment income (including dividend income in the case of equity securities) divided by the average of investment balances at the end of each quarter during the year. Investment balances, for purposes of the pre-tax yield calculation, exclude unrealized capital gains and losses. EMA limited partnership interests are included in the 2012 yields since their 2012 income is reported in net investment income.

Total return on investment portfolio is calculated from GAAP results including the total of net investment income, realized capital gains and losses, the change in unrealized net capital gains and losses, and the change in the difference between fair value and carrying value of mortgage loans and cost method limited partnerships, divided by the average investment balances. Average investment balances for the quarter are calculated as the average of the current and prior quarter investment balances. Year-to-date average investment balances are calculated (4)

(a) As of December 31, 2012, Property-Liability has commitments to invest in additional limited partnership interests totaling \$1.13 billion.

(2) Income from EMA limited partnerships is reported in net investment income in 2012 and realized capital gains and losses in 2011.

Pre-tax yields are calculated as annualized investment income (including dividend income in the case of equity securities) divided by the average of investment balances at the end of each quarter during the year. Investment balances, for purposes of the pre-tax yield calculation, exclude unrealized capital gains and losses. EMA limited partnership interests are included in the 2012 yields since their 2012 income is reported in net investment income.
 Average investment balances for the quarter are calculated as the average of the current and prior quarter investment balances. Year-to-date average investment balances are calculated

(4) Average investment balances for the quarter are calculated as the average of the current and prior quarter investment balances. Year-to-date average investment balances are calculated as the average of investment balances at the beginning of the year and the end of each quarter during the year. For purposes of the average investment balances calculation, unrealized capital gains and losses are excluded.

^a As of December 31, 2012, Allstate Financial has commitments to invest in additional limited partnership interests totaling \$947 million.

Income from EMA limited partnerships is reported in net investment income in 2012 and realized capital gains and losses in 2011.
 Pre-tax yields are calculated as annualized investment income (including dividend income in the case of equity securities) divided by the average of investment balances at the end of each quarter during the year. Investment balances, for purposes of the pre-tax yield calculation, exclude unrealized capital gains and losses. EMA limited partnership interests are included in the 2012 yields since their 2012 income is reported in net investment income.

50

⁴⁰ Average investment balances for the guarter are calculated as the average of the current and prior quarter investment balances. Year-to-date average investment balances are calculated as the average of investment balances at the beginning of the year and the end of each quarter during the year. For purposes of the average investment balances calculation, unrealized capital gains and losses are excluded.

Definitions of Non-GAAP Measures

We believe that investors' understanding of Allstate's performance is enhanced by our disclosure of the following non-GAAP measures. Our methods for calculating these measures may differ from those used by other companies and therefore comparability may be limited.

Operating income (loss) is net income (loss), excluding:

- realized capital gains and losses, after-tax, except for periodic settlements and accruals on non-hedge derivative instruments, which are reported with realized capital gains and losses but included in operating income (loss),
- valuation changes on embedded derivatives that are not hedged, after-tax,
- amortization of deferred acquisition costs ("DAC") and deferred sales inducements ("DSI"), to the extent they resulted from the recognition of certain realized capital gains and losses or valuation changes on embedded derivatives that are not hedged, after-tax,
- business combination expenses and the amortization of purchased intangible assets, after-tax,
- gain (loss) on disposition of operations, after-tax, and
- adjustments for other significant non-recurring, infrequent or unusual items, when (a) the nature of the charge or gain is such that it is reasonably unlikely to recur within two years, or (b) there has been no similar charge or gain within the prior two years.

Net income (loss) is the GAAP measure that is most directly comparable to operating income (loss). We use operating income (loss) as an important measure to evaluate our results of operations. We believe that the measure provides investors with a valuable measure of the Company's ongoing performance because it reveals trends in our insurance and financial services business that may be obscured by the net effect of realized capital gains and losses, valuation changes on embedded derivatives that are not hedged, business combination expenses and the amortization of purchased intangible assets, gain (loss) on disposition of operations and adjustments for other significant non-recurring, infrequent or unusual items. Realized capital gains and losses, valuation changes on embedded derivatives that are not hedged and gain (loss) on disposition of operations may vary significantly between periods and are generally driven by business decisions and external economic developments such as capital market conditions, the timing of which is unrelated to the insurance underwriting process. Consistent with our intent to protect results or earn additional income, operating income (loss) includes periodic settlements and accruals on certain derivative instruments that are reported in realized capital gains and losses because they do not qualify for hedge accounting or are not designated as hedges for accounting purposes. These instruments are used for economic hedges and to replicate fixed income securities, and by including them in operating income (loss), we are appropriately reflecting their trends in our performance and in a manner consistent with the economically hedged investments, product attributes (e.g. net investment income and interest credited to contractholder funds) or replicated investments. Business combination expenses are excluded because they are non-recurring in nature and the amortization of purchased intangible assets is excluded because it relates to the acquisition purchase price and is not indicative of our underlying insurance business results or trends. Non-recurring items are excluded because, by their nature, they are not indicative of our business or economic trends. Accordingly, operating income (loss) excludes the effect of items that tend to be highly variable from period to period and highlights the results from ongoing operations and the underlying profitability of our business. A byproduct of excluding these items to determine operating income (loss) is the transparency and understanding of their significance to net income variability and profitability while recognizing these or similar items may recur in subsequent periods. Operating income (loss) is used by management along with the other components of net income (loss) to assess our performance. We use adjusted measures of operating income (loss) and operating income (loss) per diluted share in incentive compensation. Therefore, we believe it is useful for investors to evaluate net income (loss), operating income (loss) and their components separately and in the aggregate when reviewing and evaluating our performance. We note that investors, financial analysts, financial and business media organizations and rating agencies utilize operating income (loss) results in their evaluation of our and our industry's financial performance and in their investment decisions, recommendations and communications as it represents a reliable, representative and consistent measurement of the industry and the Company and management's performance. We note that the price to earnings multiple commonly used by insurance investors as a forward-looking valuation technique uses operating income (loss) as the denominator. Operating income (loss) should not be considered as a substitute for net income (loss) and does not reflect the overall profitability of our business. A reconciliation of operating income (loss) to net income (loss) is provided in the schedule, "Contribution to Income".

Underwriting income (loss) is calculated as premiums earned, less claims and claims expense ("losses"), amortization of DAC, operating costs and expenses and restructuring and related charges as determined using GAAP. Management uses this measure in its evaluation of the results of operations to analyze the profitability of our Property-Liability insurance operations separately from investment results. It is also an integral component of incentive compensation. It is useful for investors to evaluate the components of income separately and in the aggregate when reviewing performance. Net income (loss) is the most directly comparable GAAP measure. Underwriting income (loss) should not be considered as a substitute for net income (loss) and does not reflect the overall profitability of our business. A reconciliation of Property-Liability underwriting income (loss) to net income (loss) is provided in the schedule, "Property-Liability Results".

Combined ratio excluding the effect of catastrophes is a non-GAAP ratio, which is computed as the difference between two GAAP operating ratios: the combined ratio and the effect of catastrophes on the combined ratio. The most directly comparable GAAP measure is the combined ratio. We believe that this ratio is useful to investors and it is used by management to reveal the trends in our Property-Liability business that may be obscured by catastrophe losses. Catastrophe losses cause our loss trends to vary significantly between periods as a result of their incidence of occurrence and magnitude and can have a significant impact on the combined ratio. We believe it is useful for investors to evaluate these components separately and in the aggregate when reviewing our underwriting performance. The combined ratio excluding the effect of catastrophes should not be considered a substitute for the combined ratio and does not reflect the overall underwriting profitability of our business. A reconciliation of combined ratio excluding the effect of catastrophes to combined ratio is provided in the schedule, "Property-Liability Results".

Combined ratio excluding the effect of catastrophes, prior year reserve reestimates, business combination expenses and the amortization of purchased intangible assets ("underlying combined ratio") is a non-GAAP ratio, which is computed as the difference between four GAAP operating ratios: the combined ratio, the effect of prior year reserve reestimates on the combined ratio, the effect of business combination expenses and the amortization of purchased intangible assets on the combined ratio. We believe that this ratio is useful to investors and it is used by management to reveal the trends in our Property-Liability business that may be obscured by catastrophe losses, prior year reserve reestimates, business combination expenses and the amortization of purchased intangible assets catastrophe losses cause our loss trends to vary significantly between periods as a result of their incidence of occurrence and magnitude, and can have a significant impact on the combined ratio. Prior year reserve reestimates are caused by unexpected loss development on historical reserves. Business combination expenses and the amortization of purchased intangible assets primarily relate to the acquisition purchase price and are not indicative of our underlying insurance business results or trends. We believe it is useful for investors to evaluate these components separately and in the aggregate when reviewing our underwriting performance. We also provide it to facilitate a comparison to our outlook on the underlying combined ratio. The most directly comparable GAAP measure is the combined ratio of the underlying combined ratio and does not reflect the overall underwriting profitability Measures", "Homeowners Profitability Measures", "Allstate Brand Profitability Measures", "Encompass Brand Profitability Measures" and "Esurance Brand Profitability Measures".

Operating income return on shareholders' equity is a ratio that uses a non-GAAP measure. It is calculated by dividing the rolling 12-month operating income by the average of shareholders' equity at the beginning and at the end of the 12-months, after excluding the effect of unrealized net capital gains and losses. Return on shareholders' equity is the most directly comparable GAAP measure. We use operating income as the numerator for the same reasons we use operating income, as discussed above. We use average shareholders' equity excluding the effect of unrealized net capital gains and losses for the denominator as a representation of shareholders' equity primarily attributable to the Company's earned and realized business operations because it eliminates the effect of items that are unrealized and vary significantly between periods due to external economic developments such as capital market conditions like changes in equity prices and interest rates, the amount and timing of which are unrelated to the insurance underwriting process. We use it to supplement our evaluation of net income and return on shareholders' equity because it excludes the effect of items that tend to be highly variable from period to period. We believe that this measure is useful to investors and that it provides a valuable tool for investors when considered along with net income return on shareholders' equity because it eliminates the after-tax effects of realized and unrealized net capital gains and losses that can fluctuate significantly from period to period and that are driven by economic developments, the magnitude and timing of which are generally not influenced by management. In addition, it eliminates non-recurring items that are not indicative of our ongoing business or economic trends. A byproduct of excluding the items noted above to determine operating income return on shareholders' equity from return on shareholders' equity is the transparency and understanding of their significance to return on shareholders' equity variability and profitability while recognizing these or similar items may recur in subsequent periods. Therefore, we believe it is useful for investors to have operating income return on shareholders' equity and return on shareholders' equity when evaluating our performance. We note that investors, financial analysts, financial and business media organizations and rating agencies utilize operating income return on shareholders' equity results in their evaluation of our and our industry's financial performance and in their investment decisions, recommendations and communications as it represents a reliable, representative and consistent measurement of the industry and the company and management's utilization of capital. Operating income return on shareholders' equity should not be considered as a substitute for return on shareholders' equity and does not reflect the overall profitability of our business. A reconciliation of return on shareholders' equity and operating income return on shareholders' equity can be found in the schedule, "Return on Shareholders' Equity"

Book value per share, excluding the impact of unrealized net capital gains and losses on fixed income securities, is a ratio that uses a non-GAAP measure. It is calculated by dividing shareholders' equity after excluding the impact of unrealized net capital gains and losses on fixed income securities and related DAC, DSI and life insurance reserves by total shares outstanding plus dilutive potential shares outstanding. We use the trend in book value per share, excluding the impact of unrealized net capital gains and losses on fixed income securities in romalized net capital gains and losses on fixed income securities, in conjunction with book value per share to identify and analyze the change in net worth attributable to management efforts between periods. We believe the non-GAAP ratio is useful to investors because it eliminates the effect of items that can fluctuate significantly from period to period and are generally driven by economic developments, primarily capital market conditions, the magnitude and timing of which are generally not influenced by management, and we believe it enhances understanding and comparability of performance by highlighting underlying business activity and profitability drivers. We note that book value per share, excluding the impact of unrealized net capital gains and losses on fixed income securities, is a measure commonly used by insurance investors as a valuation technique. Book value per share is the most directly comparable GAAP measure. Book value per share, excluding the impact of unrealized net capital gains on fixed income securities, and does not reflect the recorded net worth of our business. A reconciliation of book value per share, excluding the impact of unrealized net capital gains on fixed income securities, and book value per share can be found in the schedule, "Book Value per Share".
