"Successful execution of our customer-focused strategy and proactive risk and return management led to strong results for the fourth quarter and the full year 2013," said Thomas J. Wilson, chairman, president and chief executive officer of The Allstate Corporation. "We grew insurance policies in force in all three brands where we underwrite risk, reflecting differentiated value propositions, strong marketing, expanded distribution and a smaller decline in Allstate brand homeowners policies. Net income per diluted common share for 2013 increased 2.8% to \$4.81 as losses from the pending sale of Lincoln Benefit Life and a substantial charge for debt refinancing were offset by higher operating income and the repurchase of 7.8% of our outstanding common shares. Operating income per diluted common share for the year increased 30% to \$5.68 as we achieved our operating priorities, realized higher income from limited partnerships and benefited from lower catastrophes.

"Operating return on equity was a strong 14.5% for the full year. This reflected continued good profitability in auto insurance, success in improving underlying returns in homeowners, low catastrophes and higher income from limited partnership investments. Our share repurchases and common dividends provided \$2.20 billion of cash returns to shareholders during 2013, which represents 9.4% of the average market capitalization for the year. We are well positioned in 2014 to aggressively implement our differentiated strategy while delivering strong returns to shareholders," Wilson said.

1

Financial Results: Fourth Quarter 2013

- Insurance premiums grew in the fourth quarter in all our brands. Allstate Protection net written premium increased 4.7% for the fourth quarter of 2013 compared to the year-ago quarter. Allstate brand policies increased 0.4% from the prior year quarter. Allstate Financial premiums and contract charges grew by 7.8% for the fourth quarter of 2013 over the same period of the prior year, including a 6.3% increase in underwritten products.
- Allstate's fourth quarter 2013 net income available to common shareholders was \$810 million, or \$1.76 per diluted common share, compared to \$394 million, or \$0.81 per diluted common share in the fourth quarter of 2012.
- Operating income was \$781 million, or \$1.70 per diluted common share in the fourth quarter of 2013, compared to \$289 million or \$0.59 per diluted common share in the same period of 2012, which included \$1.12 billion in pre-tax catastrophe losses related to Sandy. 2013 included

previously announced settlement charges of \$103 million, after-tax, related to the level of lump sum pension benefit payments made to retiring employees ("settlement charges") in the quarter.

- The fourth quarter 2013 recorded property-liability combined ratio was 88.7, 13.0 points better than the prior year quarter due to significantly lower catastrophe losses. The underlying combined ratio of 87.5 for the fourth quarter slightly deteriorated by 0.8 points compared with the same period last year, reflecting continued investments in growth and increased incentive payouts to agencies and employees based on strong 2013 results.
- In the fourth quarter of 2013, Allstate Financial's net income declined \$47 million to \$119 million due to the increase to the estimated loss on the pending sale of Lincoln Benefit Life Company (LBL) and lower realized capital gains, partly offset by growth in operating income. Operating income increased 11.1% to \$160 million compared to the same quarter a year ago, benefiting from a strong increase in limited partnership income, higher benefit spread from life insurance products and lower expenses.
- Total net investment income was \$1.03 billion in the fourth quarter of 2013, and included \$202 million from limited partnership interests and \$24 million related to prepayment fee income and litigation proceeds.

Financial Results: Full Year 2013

- Insurance premiums grew in 2013, reflecting continued positive momentum in serving unique consumer segments with differentiated offerings. Total Allstate Protection net written premium rose 4.2% to \$28.16 billion for 2013, while Allstate Financial grew total premiums and contract charges by 5.0%, including a 5.5% increase in underwritten products compared to 2012.
- Net income available to common shareholders for 2013 was \$2.26 billion, or \$4.81 per diluted common share, compared to \$2.31 billion, or \$4.68 per diluted common share in 2012. Net income for the year includes a number of previously announced unusual after-tax items, including an estimated \$521 million loss on the pending disposition of LBL; a \$319 million loss on extinguishment of debt; \$150 million in settlement charges and a \$118 million curtailment gain arising from changes in other postretirement benefit offerings.
- Operating income for 2013 was \$2.67 billion, or \$5.68 per diluted common share, compared to \$2.15 billion, or \$4.36 per diluted common share in 2012, due in part to lower 2013 catastrophe losses partially offset by the \$150 million in after-tax settlement charges.

2

- Allstate's property-liability business produced a 92.0 combined ratio for 2013, 3.5 points better than 2012. The underlying combined ratio of 87.3 was essentially equal to the prior year and better than the company's full-year outlook range of 88 to 90. Our 2014 full-year outlook is an underlying combined ratio in the range of 87 to 89, reflecting continued growth across our brands, stable auto margins and the sustainability of homeowners margin improvement.
- Allstate Financial's net income declined to \$95 million in 2013 primarily due to the estimated loss on disposition related to the planned LBL sale. Operating income improved 11.2% to \$588 million in 2013, driven primarily by decreased crediting rates, higher investment prepayment fee income and litigation proceeds, increased limited partnership income, lower expenses and profitable growth at Allstate Benefits, partially offset by reduced spread-based business in force and lower benefit spread on life insurance.
- Net investment income totaled \$3.94 billion in 2013, and included \$541 million from limited partnership interests and \$139 million related to
 prepayment fee income and litigation proceeds.

Achieved All Five 2013 Operating Priorities

Grow Insurance Premiums. Total Allstate Protection net written premium growth was driven by growth in all brands.

- In the Allstate brand, which serves consumers who prefer local advice from Allstate agencies and a wide range of products, net written premium increased in the fourth quarter by 3.9% compared to the prior year quarter, driven by growth in auto and homeowners average premium and auto policy counts. Allstate brand auto policy growth continued to improve, with policies in force 1.5% higher in the fourth quarter of 2013 than in the same period of 2012, driven by growth in new business and higher retention. Allstate brand homeowner policies were 2.2% lower in the fourth quarter of 2013 versus the same period of 2012, but the rate of decline has continued to diminish from previous quarters. The Allstate brand increased net written premium by 3.0% in 2013 compared to the prior year.
- Esurance, serving the self-directed consumer segment, continued to grow rapidly in the fourth quarter of 2013, with a 23.0% increase in net written premium and 26.7% increase in policies from the fourth quarter of 2012. For the full year, Esurance increased net written premium 27.9% compared to 2012.
- Encompass, which serves consumers who value local advice and a choice of brand, grew net written premium in the fourth quarter of 2013 by 6.1% compared with the same quarter of 2012, and policies rose 6.5% from the prior year quarter. Encompass grew net written premium by 8.4% in 2013 compared with 2012.

Maintain Auto Profitability. The auto combined ratio continues to perform within the targeted range of profitability.

- Allstate brand auto recorded a fourth quarter 2013 combined ratio of 95.3 and an underlying combined ratio of 95.9, 1.9 points worse than the fourth quarter of 2012. The increase in the underlying combined ratio reflects higher underwriting expenses, primarily from increased incentive payouts, and loss cost inflation which outpaced average premium growth in the quarter. The Allstate brand recorded a 2013 auto combined ratio of 94.5 and an underlying auto combined ratio of 94.4.
- Esurance had higher auto losses, resulting in a fourth quarter 2013 auto combined ratio of 116.5 and an underlying auto combined ratio of 111.7. For the full year, Esurance had an auto combined ratio of 117.3 and an underlying combined ratio of 111.5. The Esurance team continues to adjust pricing and underwriting to ensure growth generates long-term profitability.
- Encompass recorded a fourth quarter auto combined ratio of 105.2 and an underlying combined ratio of 110.3, which included the full-year impact of a state facility assessment worth approximately 3.5 points. Encompass 2013 recorded auto combined ratio was 104.0, with an underlying combined ratio of 108.0. The Encompass team is implementing pricing and underwriting changes to ensure it achieves desired returns.

Raise Returns in Homeowners and Annuity Businesses. The company continued its progress toward building a competitive advantage in homeowners and proactively managing its annuity book of business.

- Allstate brand homeowners recorded a fourth quarter 2013 combined ratio of 66.6, a 27.3 point improvement from the prior year quarter, driven by lower catastrophes and higher average premium. The Allstate brand homeowners underlying combined ratio was 60.7, a 1.7 point improvement from the fourth quarter of 2012, as rate increases continued to benefit results and slightly higher severity was mostly offset by lower frequency. Allstate brand homeowners returns continued to improve in 2013 with a recorded combined ratio of 77.9 and an underlying combined ratio of 62.7.
- Annuity returns improved in 2013 due primarily to higher investment spread, but long-term returns remain challenged by continued low interest rates.

Proactively Manage Investments. Strong results in the current low interest rate environment were driven by limited partnership results.

- The portfolio yield in the fourth quarter was 4.8%, higher than both the fourth quarter of 2012 and third quarter of 2013, due primarily to strong limited partnership results. Total return for the fourth quarter was 1.1% with strong equity performance largely offset by lower fixed income returns. The total portfolio yield for the year was 4.6%, comparable to 2012. Total return for the year was 1.8%, primarily driven by low fixed income performance which was enhanced by strong equity returns.
- Net investment income from limited partnership interests increased 83.6% in the fourth quarter to \$202 million compared with the same quarter in 2012, reflecting both favorable valuations and strong cash distributions. For the full year, limited partnership interests produced investment income of \$541 million compared to \$348 million in 2012. Higher equity method limited partnership income resulted from favorable equity and real estate valuations which increased the carrying value of the partnerships, while cost method limited partnerships experienced an increase in distributed earnings.
- Allstate's consolidated investment portfolio totaled \$81.16 billion at December 31, 2013 compared to \$97.28 billion at December 31, 2012. The lower portfolio value reflects \$11.98 billion of investments classified as held for sale due to the pending sale of LBL and a \$2.85 billion decrease in net unrealized capital gains, primarily driven by an increase in interest rates since year-end 2012.
- We proactively reduced our exposure to interest rate risk in the property-liability portfolio over the past several quarters, resulting in decreased sensitivity to rising interest rates. While this strategy protects portfolio valuation, it lowers operating income.
- Allstate Financial's portfolio yield has been less impacted by lower reinvestment rates, as its investment cash flows have largely been used to fund liability outflows.

Reduce Our Cost Structure. Allstate made progress in reducing its underlying cost structure throughout 2013. Employee and retiree benefit programs were restructured to provide more consistent benefits among employees and better align with current market practices. The property-liability expense ratio increased in the quarter when compared to the fourth quarter of the prior year, reflecting continued investments in growth and increased incentive payouts to both agencies and employees based on the full year's strong results.

Proactive Capital Management

"Allstate's strong capital position provides the flexibility to offer attractive cash returns to shareholders while taking advantage of growth opportunities," said Steve Shebik, chief financial officer. "In 2013, we maintained our track record of providing significant cash returns to shareholders by returning \$2.20 billion in cash through a combination of share repurchases and dividends. We improved our financial strength by repurchasing outstanding debt and issuing new lower-cost senior debt, hybrid debt and preferred stock. We had \$2.56 billion in holding company deployable assets at year-end 2013."

As of December 31, 2013, \$139 million remained under the company's authorized \$2.00 billion share repurchase programs. The company repurchased 8.4 million common shares at a cost of \$449 million in the fourth quarter, bringing the total for 2013 to 37.4 million common shares repurchased for \$1.84 billion.

Book value per common share at year-end 2013 was \$45.31, a 6.9% increase from year-end 2012 and a 4.2% increase from September 30, 2013, as the benefits of higher net income and lower common shares

л	

outstanding more than offset the impact of lower unrealized gains.

Statutory surplus at December 31, 2013 was an estimated \$18.2 billion for the combined insurance operating companies, an increase of \$1.0 billion from December 31, 2012. Property-liability statutory surplus was an estimated \$15.2 billion of this total, with Allstate Financial companies accounting for the remainder. During 2013, Allstate Financial companies returned \$774 million of capital.

Visit <u>www.allstateinvestors.com</u> to view additional information about Allstate's results, including a webcast of its quarterly conference call and the presentation discussed on the call. The conference call will be held at 9 a.m. ET on Thursday, February 6.

The Allstate Corporation (NYSE: ALL) is the nation's largest publicly held personal lines insurer, serving approximately 16 million households through its Allstate, Encompass, Esurance and Answer Financial brand names and Allstate Financial business segment. Allstate branded insurance products (auto, home, life and retirement) and services are offered through Allstate agencies, independent agencies, and Allstate exclusive financial representatives, as well as via www.allstate.com, www.allstate.com/financial and 1-800 Allstate[®], and are widely known through the slogan "You're In Good Hands With Allstate[®]."

Definitions of Non-GAAP Measures

We believe that investors' understanding of Allstate's performance is enhanced by our disclosure of the following non-GAAP measures. Our methods for calculating these measures may differ from those used by other companies and therefore comparability may be limited.

Operating income is net income available to common shareholders, excluding:

realized capital gains and losses, after-tax, except for periodic settlements and accruals on non-hedge derivative instruments, which are reported with realized capital gains and losses but included in operating income,

· valuation changes on embedded derivatives that are not hedged, after-tax,

amortization of DAC and deferred sales inducements (DSI), to the extent they resulted from the recognition of certain realized capital gains and losses or valuation changes on
embedded derivatives that are not hedged, after-tax.

business combination expenses and the amortization of purchased intangible assets, after-tax,

· gain (loss) on disposition of operations, after-tax, and

adjustments for other significant non-recurring, infrequent or unusual items, when (a) the nature of the charge or gain is such that it is reasonably unlikely to recur within two years, or (b) there has been no similar charge or gain within the prior two years.

Net income available to common shareholders is the GAAP measure that is most directly comparable to operating income.

We use operating income as an important measure to evaluate our results of operations. We believe that the measure provides investors with a valuable measure of the company's ongoing performance because it reveals trends in our insurance and financial services business that may be obscured by the net effect of realized capital gains and losses, valuation changes on embedded derivatives that are not hedged, business combination expenses and the amortization of purchased intangible assets, gain (loss) on disposition of operations and adjustments for other significant non-recurring, infrequent or unusual items. Realized capital gains and losses, valuation changes on embedded derivatives that are not hedged and gain (loss) on disposition of operations may vary significantly between periods and are generally driven by business decisions and external economic developments such as capital market conditions, the timing of which is unrelated to the insurance underwriting process. Consistent with our intent to protect results or earn additional income, operating income includes periodic settlements and accruals on certain derivative instruments that are reported in realized capital gains and losses because they do not qualify for hedge accounting or are not designated as hedges for accounting purposes. These instruments are used for economic hedges and to replicate fixed income securities, and by including them in operating income, we are appropriately reflecting their trends in our performance and in a manner consistent with the economically hedged investments, product attributes (e.g. net investment income and interest credited to contractholder funds) or replicated investments. Business combination expenses are excluded because they are non-recurring in nature and the amortization of purchased

intangible assets is excluded because it relates to the acquisition purchase price and is not indicative of our underlying insurance business results or trends. Non-recurring items are excluded because, by their nature, they are not indicative of our business or economic trends. Accordingly, operating income excludes the effect of items that tend to be highly variable from period to period and highlights the results from ongoing operations and the underlying profitability of our business. A byproduct of excluding these items to determine operating income is the transparency and understanding of their significance to net income variability and profitability while recognizing these or similar items may recur in subsequent periods. Operating income is used by management along with the other components of net income available to common shareholders to assess our performance. We use adjusted measures of operating income and operating income and operating income and their components separately and in the aggregate when reviewing and evaluating our performance. We note that investors, financial analysts, financial and business media organizations and rating agencies utilize operating income results in their evaluation of our and our industry's financial performance and in their investment decisions, recommendations and communications as it represents a reliable, representative and consistent measurement of the industry and the company and management's performance. We note that price to earnings multiple commonly used by insurance investors as a forward-looking valuation technique uses operating income as the denominator. Operating income should not be considered a substitute for net income available to common shareholders and does not reflect the overall profitability of our business.

For the three months ended December 31.

For the twelve months ended December 31.

The following tables reconcile operating income and net income available to common shareholders.

Operating income return on common shareholders' equity is a ratio that uses a non-GAAP measure. It is calculated by dividing the rolling 12-month operating income by the average of common shareholders' equity at the beginning and at the end of the 12-months, after excluding the effect of unrealized net capital gains and losses. Return on common shareholders' equity is the most directly comparable GAAP measure. We use operating income as the numerator for the same reasons we use operating income, as discussed above. We use average common shareholders' equity excluding the effect of unrealized net capital gains and losses for the denominator as a representation of common shareholders' equity primarily attributable to the company's earned and realized business operations because it eliminates the effect of items that are unrealized and vary significantly between periods due to external economic developments such as capital market conditions like changes in equity prices and interest rates, the amount and timing of which are unrelated to the insurance underwriting process. We use it to supplement our evaluation of net income available to common shareholders and return on common shareholders' equity because it eliminates the after-tax effects of realized and unrealized net capital gains and losses that can fluctuate significantly from period to period and that are driven by economic developments, the magnitude and timing of which are generally not influenced by management. In addition, it eliminates non-recurring items that are not indicative of our ongoing business or economic trends. A byproduct of excluding the items noted above to determine operating income return on common shareholders' equity variability while recognizing these or similar items may recur in subsequent periods. Therefore, we believe it is useful for investors to have operating income return on common shareholders' equity and return on common shareholders' equity when evaluating our performance. We note that investors, financial analysts, fina

⁽¹⁾Allstate Financial attributed equity is the sum of equity for Allstate Life Insurance Company and the applicable equity for American Heritage Life Investment Corporation.

Underwriting income is calculated as premiums earned, less claims and claims expense ("losses"), amortization of DAC, operating costs and expenses and restructuring and related charges as determined using GAAP. Management uses this measure in its evaluation of the results of operations to analyze the profitability of our Property-Liability insurance operations separately from investment results. It is also an integral component of incentive compensation. It is useful for investors to evaluate the components of income separately and in the aggregate when reviewing performance. Net income available to common shareholders is the most directly comparable GAAP measure. Underwriting income should not be considered a substitute for net income available to common shareholders and does not reflect the overall profitability of our business. A reconciliation of Property-Liability underwriting income to net income available to common shareholders is provided in the "Segment Results" page.

Combined ratio excluding the effect of catastrophes, prior year reserve reestimates, business combination expenses and the amortization of purchased intangible assets ("underlying combined ratio") is a non-GAAP ratio, which is computed as the difference between four GAAP operating ratios: the combined ratio the effect of catastrophes on the

combined ratio, the effect of prior year non-catastrophe reserve reestimates on the combined ratio, the effect of business combination expenses and the amortization of purchased intangible assets on the combined ratio. We believe that this ratio is useful to investors and it is used by management to reveal the trends in our Property-Liability business that may be obscured by catastrophe losses, prior year reserve reestimates, business combination expenses and the amortization of purchased intangible assets. Catastrophe losses cause our loss trends to vary significantly between periods as a result of their incidence of occurrence and magnitude, and can have a significant impact on the combined ratio. Prior year reserve reestimates are caused by unexpected loss development on historical reserves. Business combination expenses and the amortization of purchase price and are not indicative of our underlying insurance business results or trends. We believe it is useful for investors to evaluate these components separately and in the aggregate when reviewing our underwriting performance. We also provide it to facilitate a comparison to our outlook on the underlying combined

ratio. The most directly comparable GAAP measure is the combined ratio. The underlying combined ratio should not be considered a substitute for the combined ratio and does not reflect the overall underwriting profitability of our business.

The following table reconciles the Property-Liability underlying combined ratio to the Property-Liability combined ratio.

	Three months ended December 31,		Twelve mont Decembe	
	2013	2012	2013	2012
Combined ratio excluding the effect of catastrophes, prior year reserve reestimates, business combination expenses and the amortization of purchased intangible assets				
("underlying combined ratio")	87.5	86.7	87.3	87.2
Effect of catastrophe losses	1.7	15.7	4.5	8.8
Effect of prior year non-catastrophe reserve reestimates	(0.8)	(1.1)	(0.1)	(1.0)
Effect of business combination expenses and the amortization of purchased intangible assets	0.3	0.4	0.3	0.5
Combined ratio	88.7	101.7	92.0	95.5
Effect of prior year catastrophe reserve reestimates	(0.1)	(1.2)	(0.3)	(1.5)

Underwriting margin is calculated as 100% minus the combined ratio.

In this news release, we provide our outlook range on the Property-Liability 2014 underlying combined ratio. A reconciliation of this measure to the combined ratio is not possible on a forward-looking basis because it is not possible to provide a reliable forecast of catastrophes. Future prior year reserve reestimates are expected to be zero because reserves are determined based on our best estimate of ultimate loss reserves as of the reporting date.

Book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, is a ratio that uses a non-GAAP measure. It is calculated by dividing common shareholders' equity after excluding the impact of unrealized net capital gains and losses on fixed income securities and related DAC, DSI and life insurance reserves by total common shares outstanding plus dilutive potential common shares outstanding. We use the trend in book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, in conjunction with book value per common share to identify and analyze the change in net worth attributable to management efforts between periods. We believe the non-GAAP ratio is useful to investors because it eliminates the effect of items that can fluctuate significantly from period to period and are generally driven by economic developments, primarily capital market conditions, the magnitude and timing of which are generally not influenced by management, and we believe it enhances understanding and comparability of performance by highlighting underlying business activity and profitability drivers. We note that book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, is a measure commonly used by insurance investors as a valuation technique. Book value per common share is the most directly comparable GAAP measure. Book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, and does not reflect the recorded net worth of our business. The following table shows the reconciliation.

(\$ in millions, except per share data)		As of D	ecembei	r 31,
		2013		2012
Book value per common share				
Numerator:				
Common shareholders' equity	\$	20,700	\$	20,580
Denominator:				
Common shares outstanding and dilutive potential common shares outstanding		456.9		485.5

Book value per common share, excluding the impact of unrealized net capital gains and				
losses on fixed income securities	\$	42.55	\$	37.14

Forward-Looking Statements and Risk Factors

This news release contains forward-looking statements about our outlook for the Property-Liability combined ratio excluding the effect of catastrophes, prior year reserve reestimates, business combination expenses, and the amortization of purchased intangible assets for 2014, and our investment portfolio. These statements are subject to the Private Securities Litigation Reform Act of 1995 and are based on management's estimates, assumptions and projections. Actual results may differ materially from those projected based on the risk factors described below.

- Premiums written and premiums earned, the denominator of the underlying combined ratio, may be materially less than projected. Policyholder attrition may be greater than
 anticipated resulting in a lower amount of insurance in force.
- Unanticipated increases in the severity or frequency of auto insurance claims may adversely affect our underwriting results. Changes in the severity or frequency of claims may affect the profitability of our Allstate Protection segment. Changes in bodily injury claim severity are driven primarily by inflation in the medical sector of the economy and litigation. Changes in auto physical damage claim severity are driven primarily by inflation in auto repair costs, auto parts prices and used car prices. The short-term level of claim frequency we experience may vary from period to period and may not be sustainable over the longer term. A decline in gas prices, increase in miles driven, and higher unemployment are examples of factors leading to a short-term frequency change. A significant long-term increase in claim frequency could have an adverse effect on our underwriting results.

The actions we have taken to reduce the sensitivity of our investment portfolio to a rise in interest rates may not be effective.
 We undertake no obligation to publicly correct or update any forward-looking statements. This news release contains unaudited financial information.

THE ALLSTATE CORPORATION

Investor Supplement Fourth Quarter 2013

The consolidated financial statements and financial exhibits included herein are unaudited. These consolidated financial statements and exhibits should be read in conjunction with the consolidated financial statements and notes thereto included in the most recent Annual Report on Form 10-K and Quarterly Reports on Form 10-Q. The results of operations for interim periods should not be considered indicative of results to be expected for the full year.

Measures used in these financial statements and exhibits that are not based on generally accepted accounting principles ("non-GAAP") are denoted with an asterisk (*) the first time they appear. These measures are defined on the page "Definitions of Non-GAAP Measures" and are reconciled to the most directly comparable GAAP measure herein.

^{A1} Rate changes include changes approved based on our net cost of reinsurance. These rate changes do not reflect initial rates filed for insurance subsidiaries initially writing business. Based on historical premiums written in those states, rate changes approved for the three month and twelve month period ending December 31, 2013 are estimated to total \$255 million and \$633 million. Rate changes do not include rating plan enhancements, including the introduction of discounts and surcharges, that result in no change in the overall rate level in the state. Allstate Brand rate changes also exclude Canadian operations and specialty auto. In 2013, the Ontario government gave the Financial Services Commission of Ontario the authority to implement an average reduction of premium rates by 15%. Regulator approval of the rate filings remains pending and is not expected to be finalized until early 2014. The rate reductions are expected to be effective for new business in the second half of 2014 and renewal contracts in late 2014. They are estimated to reduce premiums written by approximately \$45 million and premiums earned by approximately \$15 million in 2014.

²⁰ Impacts of Allstate brand auto effective rate changes as a percentage of total countrywide prior year-end premiums written were 0.5%, 0.7%, 0.2%, 0.5%, 0.6% and 1.1% for the three months ended December 31, 2013, September 30, 2013, June 30, 2013, March 31, 2013, December 31, 2012 and September 30, 2012, respectively.

Impacts of Allstate brand homeowners effective rate changes as a percentage of total countrywide prior year-end premiums written were 0.4%, 0.3%, 1.2%, 1.7%, 1.0% and 0.7% for the three months ended December 31, 2013, September 30, 2013, June 30, 2013, March 31, 2013, December 31, 2012 and September 30, 2012, respectively.

⁽⁶⁾ Represents the impact in the states where rate changes were approved during the period as a percentage of total countrywide prior year-end premiums written.

Represents the impact in the states where rate changes were approved during the period as a percentage of its respective total prior year-end premiums written in those states.
 Includes Washington, D.C.

⁽¹⁾ Policies in Force: Policy counts are based on items rather than customers. A multi-car customer would generate multiple item (policy) counts, even if all cars were insured under one policy. Allstate Dealer Services (service contracts and other products sold in conjunction with auto lending and vehicle sales transactions) and Partnership Marketing Group (roadside assistance products) statistics are not included in total policies in force since these are not available. Additionally, nonproprietary products offered by Ivantage (insurance agency) and Answer Financial (independent insurance agency) are not included.

⁽²⁾ Membership provides pay on demand access to roadside services. Fees for three months ended December 31, 2013 were \$173 thousand.

⁽³⁾ Represents non-proprietary premiums under management as of the end of the period related to personal and commercial line products offered by Ivantage when an Allstate product is not available. Premiums under management are reported on a one month delay. Premiums are estimates and are reported by entities which have brokering arrangements with Allstate. Fees for the three months ended December 31, 2013 were \$14.3 million.

⁽⁴⁾ Represents non-proprietary premiums written for the period. Fees for the three months ended December 31, 2013 were \$16.2 million.

⁽¹⁾ Statistics presented for Allstate brand exclude excess and surplus lines. Beginning in the fourth quarter of 2013, statistics include the company's Canadian operations and specialty auto. The prior periods were updated to conform to the current presentation. In addition, Auto is no longer being broken out into the Standard and Non-standard auto components.

⁽²⁾ New Issued Applications: Item counts of automobiles or homeowners insurance applications for insurance policies that were issued during the period, regardless of whether the customer was previously insured by another Allstate Protection brand. Does not include automobiles that are added by existing customers.

⁽³⁾ Average Premium - Gross Written: Gross premiums written divided by issued item count. Gross premiums written include the impacts from discounts, surcharges and ceded reinsurance premiums and exclude the impacts from mid-term premium adjustments and premium refund accruals. Average premiums represent the appropriate policy term for each line, which is 6 months for auto and 12 months for homeowners.

⁽⁴⁾ Average Premium - Net Earned: Earned premium divided by average policies in force for the period. Earned premium includes the impacts from mid-term premium adjustments and ceded reinsurance, but does not include impacts of premium refund accruals. Average premiums represent the appropriate policy term for each line, which is 6 months for auto and 12 months for homeowners.

⁵⁾ Renewal ratio: Renewal policies issued during the period, based on contract effective dates, divided by the total policies issued 6 months prior for auto or 12 months prior for homeowners.

(1) Basis of Presentation

This homeowners supplemental information schedule displays financial results for the homeowners business (defined to include standard homeowners, scheduled personal property and other than primary residence lines). Each state in which the Company writes business has been categorized into one of two exposure groupings (Hurricane or Other). Hurricane exposure states are comprised of those states in which hurricanes are the primary catastrophe exposure. However, the catastrophe losses for these states include losses due to other kinds of catastrophes. A catastrophe is defined by Allstate as an event that produces pre-tax losses before reinsurance in excess of \$1 million, and involves multiple first party policyholders, or an event that produces a number of claims in excess of a preset per-event threshold of average claims in a specific area, occurring within a certain amount of time following the event.

(2) Hurricane Exposure States

Hurricane exposure states include the following coastal locations: Alabama, Connecticut, Delaware, Florida, Georgia, Louisiana, Maine, Maryland, Massachusetts, Mississippi, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Texas, Virginia and Washington, D.C.

(3) Premium Rate Changes

Represents the impact in the states where rate changes were approved during the year as a percentage of total prior year-end premiums written in those states.

(1)

Net income available to common shareholders and operating income reflect a trailing twelve-month period. Allstate Financial attributed equity is the sum of equity for Allstate Life Insurance Company and the applicable equity for American Heritage Life Investment (2) Corporation.

(3) Average attributed equity and average adjusted attributed equity are determined using a two-point average, with the beginning and ending attributed equity and adjusted attributed equity, respectively, for the twelve-month period as data points.

(1) Includes products directly sold through call centers and internet.

(2) Primarily represents independent master brokerage agencies, and to a lesser extent, specialized brokers.

(3) Amounts are included in counts above.

(4) Excludes Allstate Benefits and non-proprietary products.

(5) New business written premiums reflect annualized premiums at initial customer enrollment (including new accounts and new employees or policies of existing accounts), reduced by an estimate for certain policies that are expected to lapse. A significant portion of Allstate Benefits business is seasonally written in the fourth guarter during many clients' annual employee benefits enrollment.

(1) Structured settlement annuities for annuitants with severe injuries or other health impairments which significantly reduced their life expectancy at the time the annuity was issued and group annuity contracts issued to sponsors of terminated pension plans.

Life-contingent structured settlement annuities for annuitants with standard life expectancy, period certain structured settlements and single premium immediate annuities with and without life contingencies. (3

- Total Allstate Financial attributed equity is the sum of equity for Allstate Life Insurance Company and the applicable equity for American Heritage Life Investment Corporation.
- Attributed equity is allocated to each product line based on statutory capital adjusted for GAAP reporting differences and the amount of capital held in Allstate Financial may vary from economic capital. The calculation of statutory capital by product incorporates internal factors for invested asset risk, insurance risk (mortality and morbidity), interest rate risk and business risk. Due to the unavailability of final statutory financial statements at the time we release our GAAP financial results, the allocation is derived from prior quarter statutory capital. Statutory capital is adjusted for appropriate GAAP accounting differences. Changes in internal capital factors, investment portfolio mix and risk as well as changes in GAAP and statutory reporting differences will result in changes to the allocation of attributed equity to products.
- Product line operating income includes allocation of income on investments supporting capital. Operating income reflects a trailing twelve-month period. Reserves and contractholder funds included with the sale of Lincoln Benefit Life Company transaction and the attributed equity comprise 28% of life insurance and 37% of deferred annuity. Accident and health insurance reserves (long-term care) included with the sale have attributed equity of approximately \$27 million and are mostly reinsured with a third party.

THE ALLSTATE CORPORATION ALLSTATE FINANCIAL INSURANCE POLICIES AND ANNUITIES IN FORCE (1) (in thousands)

Includes reserves and contractholder funds classified as held for sale.

Allstate Financial insurance policies and annuities in force reflect the number of contracts in force excluding sold blocks of business that remain on the balance sheet due to the dispositions of the business being effected through reinsurance arrangements. Also excluded are long-term care contracts for which the morbidity risk is 100% reinsured. Policy counts associated with our voluntary employee benefits group business reflect certificate counts as opposed to group counts. (2)

Excludes Allstate Benefits products sold through Allstate Agencies, which are included in the Allstate Benefits line.

Primarily business sold by independent master brokerage agencies, banks/broker-dealers and specialized structured settlement brokers. (3)

Amounts are included in counts above.

(1) As of December 31, 2013, valuations of EMA limited partnerships include approximately \$450 million of cumulative pre-tax appreciation that has been recognized in earnings but has not been distributed to investors. (2)

The fair value of cost method limited partnerships is determined using reported net asset values of the underlying funds.

(3) Higher EMA limited partnership income resulted from favorable equity and real estate valuations which increased the carrying value of the partnerships, while cost method limited partnerships experienced an increase in earnings distributed by the partnerships.

⁽¹⁾ The comparison of percentages from period to period may be distorted by investment transactions such as sales, purchases and impairment write-downs.
 ⁽²⁾ Unrealized net capital gains and losses for limited partnership interest represent the Company's share of Equity Method of Accounting ("EMA") limited partnerships' other comprehensive income. Fair value and amortized cost are not applicable.

⁽³⁾ The insurance reserves adjustment represents the amount by which the reserve balance would increase if the net unrealized gains in the applicable product portfolios were realized and reinvested at current lower interest rates, resulting in a premium deficiency. Although we evaluate premium deficiencies on the combined performance of our life insurance and immediate annuities with life contingencies, the adjustment primarily relates to structured settlement annuities with life contingencies, in addition to annuity buy-outs and certain payout annuities with life contingencies.

⁽⁴⁾ The DAC and DSI adjustment balance represents the amount by which the amortization of DAC and DSI would increase or decrease if the unrealized gains or losses in the respective product portfolios were realized.

(i) Pre-tax yields are calculated as annualized investment income before investment expense (including dividend income in the case of equity securities) divided by the average of investment balances at the end of each quarter during the year. Investment balances, for purposes of the pre-tax yield calculation, exclude unrealized capital gains and losses and include investments classified as held for sale. Excluding investments classified as held for sale, pre-tax yield was 4.8% for the three months ended December 31, 2013.

(2) Total return on investment portfolio is calculated from GAAP results including the total of net investment income, realized capital gains and losses, the change in unrealized net capital gains and losses, and the change in the difference between fair value and carrying value of mortgage loans and cost method limited partnerships, divided by the average fair value balances. For purposes of the total return calculation, investments classified as held for sale are included. Excluding investments classified as held for sale, total return on investment portfolio was 1.2% for the three months ended December 31, 2013.

(3) Average investment balances for the quarter are calculated as the average of the current and prior quarter investment balances. Year-to-date average investment balances are calculated as the average of investment balances at the beginning of the year and the end of each quarter during the year. For purposes of the average investment balances calculation, unrealized capital gains and losses are excluded and investments classified as held for sale are included.

¹⁾ Includes fixed income securities, mortgage loans, short-term and other investments.

⁽²⁾ Includes limited partnership interests, equity securities and real estate.

³⁾ Total return on investment portfolio is calculated from GAAP results including the total of net investment income, realized capital gains and losses, the change in unrealized net capital gains and losses, and the change in the difference between fair value and carrying value of mortgage loans and cost method limited partnerships, divided by the average fair value balances. For purposes of the total return calculation, investments classified as held for sale are included.

⁽⁴⁾ Consolidated interest-bearing net investment income excluding investments classified as held for sale totaled \$691 million for the three months ended December 31, 2013.

⁵⁾ Pre-tax interest-bearing yield is calculated as annualized interest-bearing investment income before investment expense divided by the average of interest-bearing investment balances at the end of each quarter during the year. Interest-bearing investment balances, for purposes of the pre-tax yield calculation, exclude unrealized capital gains and losses and include investments classified as held for sale. Excluding investments classified as held for sale, pre-tax consolidated interest-bearing yield was 4.1% for the three months ended December 31, 2013.

Definitions of Non-GAAP Measures

We believe that investors' understanding of Allstate's performance is enhanced by our disclosure of the following non-GAAP measures. Our methods for calculating these measures may differ from those used by other companies and therefore comparability may be limited.

Operating income is net income available to common shareholders, excluding:

- realized capital gains and losses, after-tax, except for periodic settlements and accruals on non-hedge derivative instruments, which are reported with realized capital gains and losses but included in operating income,
- valuation changes on embedded derivatives that are not hedged, after-tax,
- amortization of deferred acquisition costs ("DAC") and deferred sales inducements ("DSI"), to the extent they resulted from the recognition of certain realized capital gains and losses or valuation changes on embedded derivatives that are not hedged, after-tax,
- business combination expenses and the amortization of purchased intangible assets, after-tax,
- gain (loss) on disposition of operations, after-tax, and
- adjustments for other significant non-recurring, infrequent or unusual items, when (a) the nature of the charge or gain is such that it is reasonably unlikely to recur within two years, or (b) there has been no similar charge or gain within the prior two years.

Net income available to common shareholders is the GAAP measure that is most directly comparable to operating income. We use operating income as an important measure to evaluate our results of operations. We believe that the measure provides investors with a valuable measure of the Company's ongoing performance because it reveals trends in our insurance and financial services business that may be obscured by the net effect of realized capital gains and losses, valuation changes on embedded derivatives that are not hedged, business combination expenses and the amortization of purchased intangible assets, gain (loss) on disposition of operations and adjustments for other significant non-recurring, infrequent or unusual items. Realized capital gains and losses, valuation changes on embedded derivatives that are not hedged and gain (loss) on disposition of operations may vary significantly between periods and are generally driven by business decisions and external economic developments such as capital market conditions, the timing of which is unrelated to the insurance underwriting process. Consistent with our intent to protect results or earn additional income, operating income includes periodic settlements and accruals on certain derivative instruments that are reported in realized capital gains and losses because they do not qualify for hedge accounting or are not designated as hedges for accounting purposes. These instruments are used for economic hedges and to replicate fixed income securities, and by including them in operating income, we are appropriately reflecting their trends in our performance and in a manner consistent with the economically hedged investments, product attributes (e.g. net investment income and interest credited to contractholder funds) or replicated investments. Business combination expenses are excluded because they are non-recurring in nature and the amortization of purchased intangible assets is excluded because it relates to the acquisition purchase price and is not indicative of our underlying insurance business results or trends. Non-recurring items are excluded because, by their nature, they are not indicative of our business or economic trends. Accordingly, operating income excludes the effect of items that tend to be highly variable from period to period and highlights the results from ongoing operations and the underlying profitability of our business. A byproduct of excluding these items to determine operating income is the transparency and understanding of their significance to net income variability and profitability while recognizing these or similar items may recur in subsequent periods. Operating income is used by management along with the other components of net income available to common shareholders to assess our performance. We use adjusted measures of operating income and operating income per diluted common share in incentive compensation. Therefore, we believe it is useful for investors to evaluate net income available to common shareholders, operating income and their components separately and in the aggregate when reviewing and evaluating our performance. We note that investors, financial analysts, financial and business media organizations and rating agencies utilize operating income results in their evaluation of our and our industry's financial performance and in their investment decisions, recommendations and communications as it represents a reliable, representative and consistent measurement of the industry and the Company and management's performance. We note that the price to earnings multiple commonly used by insurance investors as a forward-looking valuation technique uses operating income as the denominator. Operating income should not be considered

as a substitute for net income available to common shareholders and does not reflect the overall profitability of our business. A reconciliation of operating income to net income available to common shareholders is provided in the schedule, "Contribution to Income".

Underwriting income is calculated as premiums earned, less claims and claims expense ("losses"), amortization of DAC, operating costs and expenses and restructuring and related charges as determined using GAAP. Management uses this measure in its evaluation of the results of operations to analyze the profitability of our Property-Liability insurance operations separately from investment results. It is also an integral component of incentive compensation. It is useful for investors to evaluate the components of income separately and in the aggregate when reviewing performance. Net income available to common shareholders is the most directly comparable GAAP measure. Underwriting income should not be considered as a substitute for net income available to common shareholders and does not reflect the overall profitability of our business. A reconciliation of Property-Liability underwriting income to net income available to common shareholders is provided in the schedule, "Property-Liability" Results".

Combined ratio excluding the effect of catastrophes is a non-GAAP ratio, which is computed as the difference between two GAAP operating ratios: the combined ratio and the effect of catastrophes on the combined ratio. The most directly comparable GAAP measure is the combined ratio. We believe that this ratio is useful to investors and it is used by management to reveal the trends in our Property-Liability business that may be obscured by catastrophe losses. Catastrophe losses cause our loss trends to vary significantly between periods as a result of their incidence of occurrence and magnitude and can have a significant impact on the combined ratio. We believe it is useful for investors to evaluate these components separately and in the aggregate when reviewing our underwriting performance. The combined ratio excluding the effect of catastrophes should not be considered a substitute for the combined ratio and does not reflect the overall underwriting profitability of our business. A reconciliation of combined ratio excluding the effect of catastrophes to combined ratio is provided in the schedule, "Property-Liability Results".

Combined ratio excluding the effect of catastrophes, prior year reserve reestimates, business combination expenses and the amortization of purchased intangible assets ("underlying combined ratio") is a non-GAAP ratio, which is computed as the difference between four GAAP operating ratios: the combined ratio, the effect of catastrophes on the combined ratio, the effect of prior year reserve reestimates on the combined ratio, the effect of business combination expenses and the amortization of purchased intangible assets on the combined ratio. We believe that this ratio is useful to investors and it is used by management to reveal the trends in our Property-Liability business that may be obscured by catastrophe losses, prior year reserve reestimates, business combination expenses and the amortization of purchased intangible assets. Catastrophe losses cause our loss trends to vary significantly between periods as a result of their incidence of occurrence and magnitude, and can have a significant impact on the combined ratio. Prior year reserve reestimates are caused by unexpected loss development on historical reserves. Business combination expenses results or trends. We believe it is useful for investors to evaluate these components separately and in the aggregate when reviewing our underwriting performance. We also provide it to facilitate a comparison to our outlook on the underlying combined ratio. The underlying combined ratio should not be considered as a substitute for the combined ratio and does not reflect the overall underwriting profitability of our busines, "Allstate Brand Profitability Measures", "Auto Profitability Measures" and "Homeowners Profitability Measures".

Operating income return on common shareholders' equity is a ratio that uses a non-GAAP measure. It is calculated by dividing the rolling 12month operating income by the average of common shareholders' equity at the beginning and at the end of the 12-months, after excluding the effect of unrealized net capital gains and losses. Return on common shareholders' equity is the most directly comparable GAAP measure. We use operating income as the numerator for the same reasons we use operating income, as discussed above. We use average common shareholders' equity excluding the effect of unrealized net capital gains and losses for the denominator as a representation of common shareholders' equity primarily attributable to the Company's earned and realized business operations because it eliminates the effect of items that are unrealized and vary significantly between periods due to external economic developments such as capital market conditions like changes in equity prices and interest rates, the amount and timing of which are unrelated to the insurance underwriting process. We use it to supplement our evaluation of net income available to common shareholders and return on common shareholders' equity because it excludes the effect of items that tend to be highly variable from period to period. We believe that this measure is useful to investors and that it provides a valuable tool for investors when considered along with net income return on common shareholders' equity because it eliminates the after-tax effects of realized and unrealized net capital gains and losses that can fluctuate significantly from period to period and that are driven by economic developments, the magnitude and timing of which are generally not influenced by management. In addition, it eliminates non-recurring items that are not indicative of our ongoing business or economic trends. A byproduct of excluding the items noted above to determine operating income return on common shareholders' equity from return on common shareholders' equity is the transparency and understanding of their significance to return on common shareholders' equity variability and profitability while recognizing these or similar items may recur in subsequent periods. Therefore, we believe it is useful for investors to have operating income return on common shareholders' equity and return on common shareholders' equity when evaluating our performance. We note that investors, financial analysts, financial and business media organizations and rating agencies utilize operating income return on common shareholders' equity results in their evaluation of our and our industry's financial performance and in their investment decisions, recommendations and communications as it represents a reliable, representative and consistent measurement of the industry and the company and management's utilization of capital. Operating income return on common shareholders' equity should not be considered as a substitute for return on common shareholders' equity and does not reflect the overall profitability of our business. A reconciliation of return on common shareholders' equity and operating income return on common shareholders' equity can be found in the schedule, "Return on Common Shareholders' Equity".

Book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, is a ratio that uses a non-GAAP measure. It is calculated by dividing common shareholders' equity after excluding the impact of unrealized net capital gains and losses on fixed income securities and related DAC, DSI and life insurance reserves by total common shares outstanding plus dilutive potential common shares outstanding. We use the trend in book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, in conjunction with book value per common share to identify and analyze the change in net worth attributable to management efforts between periods. We believe the non-GAAP ratio is useful to investors because it eliminates the effect of items that can fluctuate significantly from period to period and are generally driven by economic developments, primarily capital market conditions, the magnitude and timing of which are generally not influenced by management, and we believe it enhances understanding and comparability of performance by highlighting underlying business activity and profitability drivers. We note that book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, is a measure commonly used by insurance investors as a valuation technique. Book value per common share is the most directly comparable GAAP measure. Book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, should not be considered as a substitute for book value per common share, and does not reflect the recorded net worth of our business. A reconciliation of book value per common share, excluding the impact of unrealized net capital gains and book value per common share, excluding the impact of unceal gains on fixed income securities, and book value per common share.
