ALLSTATE LIFE INSURANCE COMPANY NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Unaudited)

The accompanying condensed consolidated financial statements include the accounts of Allstate Life Insurance Company ("ALIC") and its wholly owned subsidiaries (collectively referred to as the "Company"). ALIC is wholly owned by Allstate Insurance Company ("AIC"), which is wholly owned by Allstate Insurance Holdings, LLC, a wholly owned subsidiary of The Allstate Corporation (the "Corporation").

The condensed consolidated financial statements and notes as of September 30, 2013 and for the three-month and nine-month periods ended September 30, 2013 and 2012 are unaudited. The condensed consolidated financial statements reflect all adjustments (consisting only of normal recurring accruals) which are, in the opinion of management, necessary for the fair presentation of the financial position, results of operations and cash flows for the interim periods. These condensed consolidated financial statements and notes should be read in conjunction with the consolidated financial statements and notes thereto included in the Company's Annual Report on Form 10-K for the year ended December 31, 2012. The results of operations for the interim periods should not be considered indicative of results to be expected for the full year. All significant intercompany accounts and transactions have been eliminated.

Premiums and contract charges

Adopted accounting standards

Disclosures about Offsetting Assets and Liabilities

In December 2011 and January 2013, the Financial Accounting Standards Board ("FASB") issued guidance requiring expanded disclosures, including both gross and net information, for derivatives, repurchase and reverse repurchase agreements, and securities borrowing and securities lending transactions that are either offset in the reporting entity's financial statements or those that are subject to an enforceable master netting arrangement or similar agreement. The Company adopted the new guidance in the first quarter of 2013. The new guidance affects disclosures only and therefore had no impact on the Company's results of operations or financial position.

Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income

In February 2013, the FASB issued guidance requiring expanded disclosures about the amounts reclassified out of accumulated other comprehensive income by component. The guidance requires the presentation of significant amounts reclassified out of accumulated other comprehensive income by income statement line item but only if the amount reclassified is required under accounting principles generally accepted in the United States of America ("GAAP") to be reclassified to net income in its entirety in the same reporting period. For other amounts that are not required under GAAP to be reclassified in their entirety to net income, cross-reference to other disclosures that provide additional detail about those amounts is required. The Company adopted the new guidance in the first quarter of 2013. The new guidance affects disclosures only and therefore had no impact on the Company's results of operations or financial position.

5

2. Held for Sale Transaction

On July 17, 2013, the Company entered into a definitive agreement with Resolution Life Holdings, Inc. to sell Lincoln Benefit Life Company ("LBL"), LBL's life insurance business generated through independent master brokerage agencies, and all of LBL's deferred fixed annuity and long-term care insurance business for \$600 million subject to certain adjustments as of the closing date. The transaction is subject to regulatory approvals and other customary closing conditions. The Company expects the closing to occur during the first quarter of 2014. The estimated loss on disposition of \$475 million, after-tax, was recorded in third quarter 2013, excluding any impact of unrealized net capital gains and losses. This transaction met the criteria for held for sale accounting. As a result, the related assets and liabilities are included as single line items in the asset and liability sections of the Condensed Consolidated Statement of Financial Position as of September 30, 2013. The following table summarizes the assets and liabilities held for sale as of September 30, 2013.

(\$ in millions)	
Assets	
Investments	
Fixed income securities	\$ 10,514
Mortgage loans	1,400
Short-term investments	31
Policy loans	197
Other investments	97
Total investments	 12,239

Cash	13
Deferred policy acquisition costs	741
Reinsurance recoverables, net	1,403
Accrued investment income	117
Other assets	52
Separate Accounts	1,655
Assets held for sale	 16,220
Less: Loss accrual	(643)
Total assets held for sale	\$ 15,577
Liabilities	
Reserve for life-contingent contract benefits	\$ 1,629
Contractholder funds	11,283
Unearned premiums	12
Deferred income taxes	114
Other liabilities and accrued expenses	215
Separate Accounts	 1,655
Total liabilities held for sale	\$ 14,908

Included in shareholder's equity is \$111 million of accumulated other comprehensive income related to assets held for sale.

3. Supplemental Cash Flow Information

Non-cash modifications of certain mortgage loans, fixed income securities, limited partnership interests and other investments, as well as mergers completed with equity securities, totaled \$259 million and \$138 million for the nine months ended September 30, 2013 and 2012, respectively.

6

Liabilities for collateral received in conjunction with the Company's securities lending program and over-the-counter ("OTC") derivatives are reported in other liabilities and accrued expenses or other investments. The accompanying cash flows are included in cash flows from operating activities in the Condensed Consolidated Statements of Cash Flows along with the activities resulting from management of the proceeds, which are as follows:

(\$ in millions)	Nine mo Septe	
	 2013	2012
Net change in proceeds managed	 	
Net change in short-term investments	\$ 199	\$ (240)
Operating cash flow provided (used)	 199	(240)

7

The total amount of other-than-temporary impairment losses included in accumulated other comprehensive income at the time of impairment for fixed income securities, which were not included in earnings, are presented in the following table. The amount excludes \$161 million and \$134 million as of September 30, 2013 and December 31, 2012, respectively, of net unrealized gains related to changes in valuation of the fixed income securities subsequent to the impairment measurement date.

(\$ in millions)		September 30, 2013	December 31, 2012
Municipal	\$	(5)	\$ (5)
Corporate		(7)	(1)
ABS		(10)	(14)
RMBS		(86)	(103)
CMBS	_	(16)	(19)
Total	\$	(124)	\$ (142)

Rollforwards of the cumulative credit losses recognized in earnings for fixed income securities held as of the end of the period are as follows:

(\$ in millions)	Three mo	 		Nine mo Septe	 		
	2013	2012	_	2013	2012		
Beginning balance	\$ (318)	\$ (460)	\$	(345)	\$ (581)		
Additional credit loss for securities previously other-than-temporarily							
impaired		(7)		(12)	(29)		
Additional credit loss for securities not previously other-than-temporarily							
impaired	(2)	(2)		(19)	(10)		
Reduction in credit loss for securities disposed or collected	12	80		68	231		
Reduction in credit loss for securities the Company has made the decision to							
sell or more likely than not will be required to sell							
Change in credit loss due to accretion of increase in cash flows							
Ending balance (1)	\$ (308)	\$ (389)	\$	(308)	\$ (389)		

⁽¹⁾ The September 30, 2013 ending balance includes \$59 million of cumulative credit losses recognized in earnings for fixed income securities that are classified as held for sale.

The Company uses its best estimate of future cash flows expected to be collected from the fixed income security, discounted at the security's original or current effective rate, as appropriate, to calculate a recovery value and determine whether a credit loss exists. The determination of cash flow estimates is inherently subjective and methodologies may vary depending on facts and circumstances specific to the security. All reasonably available information

relevant to the collectability of the security, including past events, current conditions, and reasonable and supportable assumptions and forecasts, are considered when developing the estimate of cash flows expected to be collected. That information generally includes, but is not limited to, the remaining payment terms of the security, prepayment speeds, foreign exchange rates, the financial condition and future earnings potential of the issue or issuer, expected defaults, expected recoveries, the value of underlying collateral, vintage, geographic concentration, available reserves or escrows, current subordination levels, third party guarantees and other credit enhancements. Other information, such as industry analyst reports and forecasts, sector credit ratings, financial condition of the bond insurer for insured fixed income securities, and other market data relevant to the realizability of contractual cash flows, may also be considered. The estimated fair value of collateral will be used to estimate recovery value if the Company determines that the security is dependent on the liquidation of collateral for ultimate settlement. If the estimated recovery value is less than the amortized cost of the security, a credit loss exists and an other-than-temporary impairment for the difference between the estimated recovery value and amortized cost is recorded in earnings. The portion of the unrealized loss related to factors other than credit remains classified in accumulated other comprehensive income. If the Company determines that the fixed income security does not have sufficient cash flow or other information to estimate a recovery value for the security, the Company may conclude that the entire decline in fair value is deemed to be credit related and the loss is recorded in earnings.

10

Unrealized net capital gains and losses

Unrealized net capital gains and losses included in accumulated other comprehensive income are as follows:

(\$ in millions)	Fair			Gross t	ınrea	Unrealized net		
September 30, 2013		value	_	Gains		Losses	gains	(losses)

⁽¹⁾ Included in the fair value of derivative instruments are \$2 million classified as assets and \$19 million classified as liabilities.

11

Change in unrealized net capital gains and losses

The change in unrealized net capital gains and losses for the nine months ended September 30, 2013 is as follows:

(\$ in millions)	
Fixed income securities	\$ (2,143)
Equity securities	12
Derivative instruments	3

⁽²⁾ Unrealized net capital gains and losses for limited partnership interests represent the Company's share of EMA limited partnerships' other comprehensive income. Fair value and gross gains and losses are not applicable

⁽³⁾ The insurance reserves adjustment represents the amount by which the reserve balance would increase if the net unrealized gains in the applicable product portfolios were realized and reinvested at current lower interest rates, resulting in a premium deficiency. Although the Company evaluates premium deficiencies on the combined performance of life insurance and immediate annuities with life contingencies, the adjustment primarily relates to structured settlement annuities with life contingencies, in addition to annuity buy-outs and certain payout annuities with life contingencies.

Portfolio monitoring

Redeemable preferred stock

Total fixed income securities

The Company has a comprehensive portfolio monitoring process to identify and evaluate each fixed income and equity security whose carrying value may be other-than-temporarily impaired.

For each fixed income security in an unrealized loss position, the Company assesses whether management with the appropriate authority has made the decision to sell or whether it is more likely than not the Company will be required to sell the security before recovery of the amortized cost basis for reasons such as liquidity, contractual or regulatory purposes. If a security meets either of these criteria, the security's decline in fair value is considered other than temporary and is recorded in earnings.

If the Company has not made the decision to sell the fixed income security and it is not more likely than not the Company will be required to sell the fixed income security before recovery of its amortized cost basis, the Company evaluates whether it expects to receive cash flows sufficient to recover the entire amortized cost basis of the security. The Company calculates the estimated recovery value by discounting the best estimate of future cash flows at the security's original or current effective rate, as appropriate, and compares this to the amortized cost of the security. If the Company does not expect to receive cash flows sufficient to recover the entire amortized cost basis of the fixed income security, the credit loss component of the impairment is recorded in earnings, with the remaining amount of the unrealized loss related to other factors recognized in other comprehensive income.

For equity securities, the Company considers various factors, including whether it has the intent and ability to hold the equity security for a period of time sufficient to recover its cost basis. Where the Company lacks the intent and ability to hold to recovery, or believes the recovery period is extended, the equity security's decline in fair value is considered other than temporary and is recorded in earnings.

For fixed income and equity securities managed by third parties, either the Company has contractually retained its decision making authority as it pertains to selling securities that are in an unrealized loss position or it recognizes any unrealized loss at the end of the period through a charge to earnings.

The Company's portfolio monitoring process includes a quarterly review of all securities to identify instances where the fair value of a security compared to its amortized cost (for fixed income securities) or cost (for equity securities) is below established thresholds. The process also includes the monitoring of other impairment indicators such as ratings, ratings downgrades and payment defaults. The securities identified, in addition to other securities for which the Company may have a concern, are evaluated for potential other-than-temporary impairment using all reasonably available information relevant to the collectability or recovery of the security. Inherent in the Company's evaluation of other-than-temporary impairment for these fixed income and equity securities are assumptions and estimates about the financial condition and future earnings potential of the issue or issuer. Some of the factors that may be considered in evaluating whether a decline in fair value is other than temporary are: 1) the financial condition, near-term and long-term prospects of the issue or issuer, including relevant industry specific market conditions and trends, geographic location and implications of rating agency actions and offering prices; 2)

12

the specific reasons that a security is in an unrealized loss position, including overall market conditions which could affect liquidity; and 3) the length of time and extent to which the fair value has been less than amortized cost or cost.

The following table summarizes the gross unrealized losses and fair value of fixed income and equity securities by the length of time that individual securities have been in a continuous unrealized loss position.

As of September 30, 2013, \$297 million of unrealized losses are related to securities with an unrealized loss position less than 20% of amortized cost or cost, the degree of which suggests that these securities do not pose a high risk of being other-than-temporarily impaired. Of the \$297 million, \$244 million are related to unrealized losses on investment grade fixed income securities. Investment grade is defined as a security having a rating of Aaa, Aa, A or Baa from Moody's, a rating of AAA, AA, A or BBB from Standard & Poor's ("S&P"), Fitch, Dominion, Kroll or Realpoint, a rating of aaa, aa, a or bbb from A.M. Best, or a comparable internal rating if an externally provided rating is not available. Unrealized losses on investment grade securities are principally related to increasing risk-free interest rates or widening credit spreads since the time of initial purchase.

As of September 30, 2013, the remaining \$100 million of unrealized losses are related to securities in unrealized loss positions greater than or equal to 20% of amortized cost. Investment grade fixed income securities comprising \$56 million of these unrealized losses were evaluated based on factors such as discounted cash flows and the financial condition and near-term and long-term prospects of the issue or issuer and were determined to have adequate resources to fulfill contractual obligations. Of the \$100 million, \$44 million are related to below investment grade fixed income securities. Of these amounts, \$30 million are related to below investment grade fixed income securities that had been in an unrealized loss position greater than or equal to 20% of amortized cost for a period of twelve or more consecutive months as of September 30, 2013.

13

ABS, RMBS and CMBS in an unrealized loss position were evaluated based on actual and projected collateral losses relative to the securities' positions in the respective securitization trusts, security specific expectations of cash flows, and credit ratings. This evaluation also takes into consideration credit enhancement, measured in terms of (i) subordination from other classes of securities in the trust that are contractually obligated to absorb losses before the class of security the Company owns, (ii) the expected impact of other structural features embedded in the securitization trust beneficial to the class of securities the Company owns, such as overcollateralization and excess spread, and (iii) for ABS and RMBS in an unrealized loss position, credit enhancements from reliable bond insurers, where applicable. Municipal bonds in an unrealized loss position were evaluated based on the quality of the underlying securities. Unrealized losses on equity securities are primarily related to temporary equity market fluctuations of securities that are expected to recover

As of September 30, 2013, the Company has not made the decision to sell and it is not more likely than not the Company will be required to sell fixed income securities with unrealized losses before recovery of the amortized cost basis. As of September 30, 2013, the Company had the intent and ability to hold equity securities with unrealized losses for a period of time sufficient for them to recover.

Limited partnerships

As of September 30, 2013 and December 31, 2012, the carrying value of equity method limited partnerships totaled \$1.44 billion and \$1.31 billion, respectively. The Company recognizes an impairment loss for equity method limited partnerships when evidence demonstrates that the loss is other than temporary. Evidence of a loss in value that is other than temporary may include the absence of an ability to recover the carrying amount of the investment or the inability of the investee to sustain a level of earnings that would justify the carrying amount of the investment. The Company had no write-downs related to equity method limited partnerships for the three or nine months ended September 30, 2013 and 2012.

As of September 30, 2013 and December 31, 2012, the carrying value for cost method limited partnerships was \$603 million and \$617 million, respectively. To determine if an other-than-temporary impairment has occurred, the Company evaluates whether an impairment indicator has occurred in the period that may have a significant adverse effect on the carrying value of the investment. Impairment indicators may include: significantly reduced valuations of the investments held by the limited partnerships; actual recent cash flows received being significantly less than expected cash flows; reduced valuations based on financing completed at a lower value; completed sale of a material underlying investment at a price significantly lower than expected; or any other adverse events since the last financial statements received that might affect the fair value of the investee's capital. Additionally, the Company's portfolio monitoring process includes a quarterly review of all cost method limited partnerships to identify instances where the net asset value is below established thresholds for certain periods of time, as well as investments that are performing below expectations, for further impairment consideration. If a cost method limited partnership is other-than-temporarily impaired, the carrying value is written down to fair value, generally estimated to be equivalent to the reported net asset value of the underlying funds. The Company had \$1 million and \$5 million of write-downs related to cost method limited partnerships for the three months ended September 30, 2012 and \$2 million of write-downs for the nine months ended September 30, 2012.

Mortgage loans

Mortgage loans are evaluated for impairment on a specific loan basis through a quarterly credit monitoring process and review of key credit quality indicators. Mortgage loans are considered impaired when it is probable that the Company will not collect the contractual principal and interest. Valuation allowances are established for impaired loans to reduce the carrying value to the fair value of the collateral less costs to sell or the present value of the loan's expected future repayment cash flows discounted at the loan's original effective interest rate. Impaired mortgage loans may not have a valuation allowance when the fair value of the collateral less costs to sell is higher than the carrying value. Valuation allowances are adjusted for subsequent changes in the fair value of the collateral less costs to sell. Mortgage loans are charged off against their corresponding valuation allowances when there is no reasonable expectation of recovery. The impairment evaluation is non-statistical in respect to the aggregate portfolio but considers facts and circumstances attributable to each loan. It is not considered probable that additional impairment losses, beyond those identified on a specific loan basis, have been incurred as of September 30, 2013.

Debt service coverage ratio is considered a key credit quality indicator when mortgage loans are evaluated for impairment. Debt service coverage ratio represents the amount of estimated cash flows from the property available to the borrower to meet principal and interest payment obligations. Debt service coverage ratio estimates are updated annually or more frequently if conditions are warranted based on the Company's credit monitoring process.

The following table reflects the carrying value of non-impaired fixed rate and variable rate mortgage loans summarized by debt service coverage ratio distribution.

(\$ in millions)	_		Se	eptember 30, 201	3		December 31, 2012							
Debt service coverage ratio distribution	_	Fixed rate mortgage loans		Variable rate mortgage loans		Total	-	Fixed rate mortgage loans		Variable rate mortgage loans		Total		
Below 1.0	\$	146	\$		\$	146	\$	266	\$		\$	266		
1.0 - 1.25		658				658		1,158				1,158		
1.26 - 1.50		969		3		972		1,364		17		1,381		
Above 1.50		2,288		112		2,400		2,854		129		2,983		
Total non-impaired mortgage loans	\$	4,061	\$	115	\$	4,176	\$	5,642	\$	146	\$	5,788		

Mortgage loans with a debt service coverage ratio below 1.0 that are not considered impaired primarily relate to instances where the borrower has the financial capacity to fund the revenue shortfalls from the properties for the foreseeable term, the decrease in cash flows from the properties is considered temporary, or there are other risk mitigating circumstances such as additional collateral, escrow balances or borrower guarantees.

The net carrying value of impaired mortgage loans is as follows:

(\$ in millions)	September 30, 2013	December 31, 2012
Impaired mortgage loans with a valuation allowance	\$ 88	\$ 147
Impaired mortgage loans without a valuation allowance		8
Total impaired mortgage loans	\$ 88	\$ 155
Valuation allowance on impaired mortgage loans	\$ 25	\$ 42

The average balance of impaired loans was \$88 million and \$214 million for the nine months ended September 30, 2013 and 2012, respectively.

The rollforward of the valuation allowance on impaired mortgage loans is as follows:

(\$ in millions)			nonth embe	s ended er 30		Nine months ended September 30,			
	_	2013		2012	2013		2012		
Beginning balance	\$	21	\$	48	\$ 42	\$	63

Charge offs				(2)	(4)		(13)		
Mortgage loans classified as held for sale		(2)			(2)				
Ending balance	\$	25	\$	47	\$ 25	\$	47		

The carrying value of past due mortgage loans is as follows:

S	September 30, 2013		December 31, 2012
\$		\$	20
	3		4
	3		24
	4,261		5,919
\$	4,264	\$	5,943
	\$	\$ 3 3 4,261	\$ 2013 \$ \$ 3 3 4,261

5. Fair Value of Assets and Liabilities

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The hierarchy for inputs used in determining fair value maximizes the use of observable inputs and minimizes the use of unobservable inputs by requiring that observable inputs be used when available. Assets and liabilities recorded on the Condensed Consolidated Statements of Financial Position at fair value are categorized in the fair value hierarchy based on the observability of inputs to the valuation techniques as follows:

15

Level 1: Assets and liabilities whose values are based on unadjusted quoted prices for identical assets or liabilities in an active market that the Company can access.

Level 2: Assets and liabilities whose values are based on the following:

- (a) Quoted prices for similar assets or liabilities in active markets;
- (b) Quoted prices for identical or similar assets or liabilities in markets that are not active; or
- (c) Valuation models whose inputs are observable, directly or indirectly, for substantially the full term of the asset or liability.

Level 3: Assets and liabilities whose values are based on prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. Unobservable inputs reflect the Company's estimates of the assumptions that market participants would use in valuing the assets and liabilities.

The availability of observable inputs varies by instrument. In situations where fair value is based on internally developed pricing models or inputs that are unobservable in the market, the determination of fair value requires more judgment. The degree of judgment exercised by the Company in determining fair value is typically greatest for instruments categorized in Level 3. In many instances, valuation inputs used to measure fair value fall into different levels of the fair value hierarchy. The category level in the fair value hierarchy is determined based on the lowest level input that is significant to the fair value measurement in its entirety. The Company uses prices and inputs that are current as of the measurement date, including during periods of market disruption. In periods of market disruption, the ability to observe prices and inputs may be reduced for many instruments.

The Company is responsible for the determination of fair value and the supporting assumptions and methodologies. The Company gains assurance that assets and liabilities are appropriately valued through the execution of various processes and controls designed to ensure the overall reasonableness and consistent application of valuation methodologies, including inputs and assumptions, and compliance with accounting standards. For fair values received from third parties or internally estimated, the Company's processes and controls are designed to ensure that the valuation methodologies are appropriate and consistently applied, the inputs and assumptions are reasonable and consistent with the objective of determining fair value, and the fair values are accurately recorded. For example, on a continuing basis, the Company assesses the reasonableness of individual fair values that have stale security prices or that exceed certain thresholds as compared to previous fair values received from valuation service providers or brokers or derived from internal models. The Company performs procedures to understand and assess the methodologies, processes and controls of valuation service providers. In addition, the Company may validate the reasonableness of fair values by comparing information obtained from valuation service providers or brokers to other third party valuation sources for selected securities. The Company performs ongoing price validation procedures such as back-testing of actual sales, which corroborate the various inputs used in internal models to market observable data. When fair value determinations are expected to be more variable, the Company validates them through reviews by members of management who have relevant expertise and who are independent of those charged with executing investment transactions.

The Company has two types of situations where investments are classified as Level 3 in the fair value hierarchy. The first is where quotes continue to be received from independent third-party valuation service providers and all significant inputs are market observable; however, there has been a significant decrease in the volume and level of activity for the asset when compared to normal market activity such that the degree of market observability has declined to a point where categorization as a Level 3 measurement is considered appropriate. The indicators considered in determining whether a significant decrease in the volume and level of activity for a specific asset has occurred include the level of new issuances in the primary market, trading volume in the secondary market, the level

16

of credit spreads over historical levels, applicable bid-ask spreads, and price consensus among market participants and other pricing sources.

The second situation where the Company classifies securities in Level 3 is where specific inputs significant to the fair value estimation models are not market observable. This primarily occurs in the Company's use of broker quotes to value certain securities where the inputs have not been corroborated to be market observable, and the use of valuation models that use significant non-market observable inputs.

Certain assets are not carried at fair value on a recurring basis, including investments such as mortgage loans, limited partnership interests, bank loans and policy loans. Accordingly, such investments are only included in the fair value hierarchy disclosure when the investment is subject to remeasurement at fair value after initial recognition and the resulting remeasurement is reflected in the condensed consolidated financial statements. In addition, derivatives embedded in fixed income securities are not disclosed in the hierarchy as free-standing derivatives since they are presented with the host contracts in fixed income securities.

In determining fair value, the Company principally uses the market approach which generally utilizes market transaction data for the same or similar instruments. To a lesser extent, the Company uses the income approach which involves determining fair values from discounted cash flow methodologies. For the majority of Level 2 and Level 3 valuations, a combination of the market and income approaches is used.

Summary of significant valuation techniques for assets and liabilities measured at fair value on a recurring basis

Level 1 measurements

- · <u>Fixed income securities:</u> Comprise certain U.S. Treasuries. Valuation is based on unadjusted quoted prices for identical assets in active markets that the Company can access.
- <u>Equity securities:</u> Comprise actively traded, exchange-listed equity securities. Valuation is based on unadjusted quoted prices for identical assets in active markets that the Company can access.
- · Short-term: Comprise actively traded money market funds that have daily quoted net asset values for identical assets that the Company can access.
- <u>Separate account assets</u>: Comprise actively traded mutual funds that have daily quoted net asset values for identical assets that the Company can access. Net asset values for the actively traded mutual funds in which the separate account assets are invested are obtained daily from the fund managers.
- · <u>Assets held for sale:</u> Comprise U.S. Treasury fixed income securities, short-term investments and separate account assets. The valuation is based on the respective asset type as described above.

Level 2 measurements

· Fixed income securities:

U.S. government and agencies: The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads.

Municipal: The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads.

Corporate, including privately placed: The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads. Also included are privately placed securities valued using a discounted cash flow model that is widely accepted in the financial services industry and uses market observable inputs and inputs derived principally from, or corroborated by, observable market data. The primary inputs to the discounted cash flow model include an interest rate yield curve, as well as published credit spreads for similar assets in markets that are not active that incorporate the credit quality and industry sector of the issuer.

Foreign government: The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads.

ABS and RMBS: The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields, prepayment speeds, collateral

17

performance and credit spreads. Certain ABS are valued based on non-binding broker quotes whose inputs have been corroborated to be market observable.

CMBS: The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields, collateral performance and credit spreads.

Redeemable preferred stock: The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields, underlying stock prices and credit spreads.

- <u>Equity securities:</u> The primary inputs to the valuation include quoted prices or quoted net asset values for identical or similar assets in markets that are not active.
- · <u>Short-term:</u> The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads. For certain short-term investments, amortized cost is used as the best estimate of fair value.
- · Other investments: Free-standing exchange listed derivatives that are not actively traded are valued based on quoted prices for identical instruments in markets that are not active.

OTC derivatives, including interest rate swaps, foreign currency swaps, foreign exchange forward contracts, certain options and certain credit default swaps, are valued using models that rely on inputs such as interest rate yield curves, currency rates, and counterparty credit spreads that are observable for substantially the full term of the contract. The valuation techniques underlying the models are widely accepted in the financial services industry and do not involve significant judgment.

• Assets held for sale: Comprise U.S. government and agencies, municipal, corporate, foreign government, ABS, RMBS and CMBS fixed income securities, and short-term investments. The valuation is based on the respective asset type as described above.

Level 3 measurements

· <u>Fixed income securities:</u>

Municipal: Municipal bonds that are not rated by third party credit rating agencies but are rated by the National Association of Insurance Commissioners ("NAIC"). The primary inputs to the valuation of these municipal bonds include quoted prices for identical or similar assets in markets that exhibit less liquidity relative to those markets supporting Level 2 fair value measurements, contractual cash flows, benchmark yields and credit spreads. Also includes Auction rate securities ("ARS") primarily backed by student loans that have become illiquid due to failures in the auction market that are valued using a discounted cash flow model that is widely accepted in the financial services industry and uses significant non-market observable inputs, including the anticipated date liquidity will return to the market.

Corporate, including privately placed: Primarily valued based on non-binding broker quotes where the inputs have not been corroborated to be market observable. Also includes equity-indexed notes which are valued using a discounted cash flow model that is widely accepted in the financial services industry and uses significant non-market observable inputs, such as volatility. Other inputs include an interest rate yield curve, as well as published credit spreads for similar assets that incorporate the credit quality and industry sector of the issuer.

ABS, RMBS and CMBS: Valued based on non-binding broker quotes received from brokers who are familiar with the investments and where the inputs have not been corroborated to be market observable.

- <u>Equity securities:</u> The primary inputs to the valuation include quoted prices or quoted net asset values for identical or similar assets in markets that exhibit less liquidity relative to those markets supporting Level 2 fair value measurements.
- Other investments: Certain OTC derivatives, such as interest rate caps, certain credit default swaps and certain options (including swaptions), are valued using models that are widely accepted in the financial services industry. These are categorized as Level 3 as a result of the significance of non-market observable inputs such as volatility. Other primary inputs include interest rate yield curves and credit spreads.

- Assets held for sale: Comprise municipal, corporate, ABS and CMBS fixed income securities. The valuation is based on the respective asset type as described above.
- · <u>Contractholder funds:</u> Derivatives embedded in certain life and annuity contracts are valued internally using models widely accepted in the financial services industry that determine a single best estimate of fair value for the embedded derivatives within a block of contractholder liabilities. The models primarily use stochastically determined cash flows based on the contractual elements of embedded derivatives, projected option cost and applicable market data, such as interest rate yield curves and equity index volatility assumptions. These are categorized as Level 3 as a result of the significance of non-market observable inputs.
- · <u>Liabilities held for sale:</u> Comprise derivatives embedded in life and annuity contracts. The valuation is the same as described above for contractholder funds.

Assets and liabilities measured at fair value on a non-recurring basis

Mortgage loans written-down to fair value in connection with recognizing impairments are valued based on the fair value of the underlying collateral less costs to sell. Limited partnership interests written-down to fair value in connection with recognizing other-than-temporary impairments are valued using net asset values. The carrying value of the LBL business was written-down to fair value in connection with being classified as held for sale.

19

The following table summarizes the Company's assets and liabilities measured at fair value on a recurring and non-recurring basis as of September 30, 2013

(\$ in millions)	Quoted prices in active other observable identical assets (Level 1) (Level 2)		Significant unobservable inputs (Level 3)			Counterparty and cash collateral netting		Balance as of September 30, 2013

Total liabilities at fair value	\$		\$	(91)	\$	(583)	\$ 29	\$	(645)
% of total liabilities at fair value		%		14.1 %		90.4 %	(4.5) %	_	100.0 %

⁽¹⁾ Includes \$4 million of mortgage loans, \$1 million of limited partnership interests and \$1 million of other investments written-down to fair value in connection with recognizing other-than-temporary impairments.

The following table summarizes quantitative information about the significant unobservable inputs used in Level 3 fair value measurements.

(\$ in millions)			Valuation technique	Unobservable input	Range	Weighted average
September 30, 2013 ARS backed by student loans	\$	82	Discounted cash flow model	Anticipated date liquidity will return to the market	36 - 54 months	37 - 49 months
Derivatives embedded in life and annuity contracts - Equity-indexed and forward starting options	\$	(205)	Stochastic cash flow model	Projected option cost	1.0 - 2.0 %	1.72 %
Liabilities held for sale — Equity- indexed and forward starting options	\$	(249)	Stochastic cash flow model	Projected option cost	1.0 - 2.0 %	1.93 %
December 31, 2012 ARS backed by student loans	\$	202	Discounted cash flow model	Anticipated date liquidity will return to the market	18 - 60 months	32 - 44 months
Derivatives embedded in life and annuity contracts - Equity-indexed and forward starting options	\$	(419)	Stochastic cash flow model	Projected option cost	1.0 - 2.0 %	1.92 %

If the anticipated date liquidity will return to the market is sooner (later), it would result in a higher (lower) fair value. If the projected option cost increased (decreased), it would result in a higher (lower) liability fair value.

As of September 30, 2013 and December 31, 2012, Level 3 fair value measurements include \$1.11 billion and \$1.72 billion, respectively, of fixed income securities valued based on non-binding broker quotes where the inputs have not been corroborated to be market observable. As of September 30, 2013, Level 3 fair value measurements for assets held for sale include \$345 million of fixed income securities valued based on non-binding broker quotes where the inputs have not been corroborated to be market observable. The Company does not develop the unobservable inputs used in measuring fair value; therefore, these are not included in the table above. However, an increase (decrease) in credit spreads for fixed income securities valued based on non-binding broker quotes would result in a lower (higher) fair value.

22

⁽¹⁾ The effect to net income totals \$205 million and is reported in the Condensed Consolidated Statements of Operations and Comprehensive Income as follows: \$37 million in realized capital gains and losses, \$17 million in net investment income, \$119 million in interest credited to contractholder funds and \$32 million in contract benefits.

(2) Comprises \$2 million of assets and \$32 million of liabilities.

Transfers between level categorizations may occur due to changes in the availability of market observable inputs, which generally are caused by changes in market conditions such as liquidity, trading volume or bid-ask spreads. Transfers between level categorizations may also occur due to changes in the

valuation source. For example, in situations where a fair value quote is not provided by the Company's independent third-party valuation service provider and as a result the price is stale or has been replaced with a broker quote whose inputs have not been corroborated to be market observable, the security is transferred into Level 3. Transfers in and out of level categorizations are reported as having occurred at the beginning of the quarter in which the transfer occurred. Therefore, for all transfers into Level 3, all realized and changes in unrealized gains and losses in the quarter of transfer are reflected in the Level 3

There were no transfers between Level 1 and Level 2 during the three months and nine months ended September 30, 2013. During the nine months ended September 30, 2012, certain U.S. government securities were transferred into Level 1 from Level 2 as a result of increased liquidity in the market and a sustained increase in the market activity for these assets.

Transfers into Level 3 during the three months and nine months ended September 30, 2013 and 2012 included situations where a fair value quote was not provided by the Company's independent third-party valuation service provider and as a result the price was stale or had been replaced with a broker quote where the inputs have not been corroborated to be market observable resulting in the security being classified as Level 3. Transfers out of Level 3 during the three months and nine months ended September 30, 2013 and 2012 included situations where a broker quote was used in the prior period and a fair value quote became available from the Company's independent third-party valuation service provider in the current period. A quote utilizing the new pricing source was not available as of the prior period, and any gains or losses related to the change in valuation source for individual securities were not significant.

The following table provides the change in unrealized gains and losses included in net income for Level 3 assets and liabilities held as of September 30.

(\$ in millions)		Three mo				Nine mo Septe	
	_	2013		2012		2013	2012
Assets	_		_	,

annuity contracts	\$	8	\$	160	\$	77	\$ 151
Liabilities held for sale		16				16	
Total recurring Level 3 liabilities	\$	24	\$	160	\$	93	\$ 151

The amounts in the table above represent the change in unrealized gains and losses included in net income for the period of time that the asset or liability was determined to be in Level 3. These gains and losses total \$24 million for the three months ended September 30, 2013 and are reported as follows: \$(2) million in realized capital gains and losses, \$2 million in net investment income, \$14 million in interest credited to contractholder funds and \$10 million in contract benefits. These gains and losses total \$156 million for the three months ended September 30, 2012 and are reported as follows: \$(9) million in realized capital gains and losses, \$5 million in net investment income, \$142 million in interest credited to contractholder funds and \$18 million in contract benefits. These gains and losses total \$108 million for the nine months ended September 30, 2013 and are reported as follows: \$7 million in realized capital gains and losses, \$8 million in net investment income, \$37 million in interest credited to contractholder funds and \$56 million in contract benefits. These gains and losses total \$164 million for the nine months ended September 30, 2012 and are reported as follows: \$14 million in net investment income, \$118 million in interest credited to contractholder funds and \$32 million in contract benefits.

27

Presented below are the carrying values and fair value estimates of financial instruments not carried at fair value.

Financial assets

rollforward table.

(\$ in millions)		Septeml	ber 30	, 2013		December 31, 2012				
	-	Carrying value		Fair value	· -	Carrying value		Fair value		
Mortgage loans	\$	4,264	\$	4,409	\$	5,943	\$	6,223		
Cost method limited partnerships		603		787		617		778		
Agent loans		328		319		319		314		
Bank loans		167		168		282		282		
Notes due from related party		275		275		275		275		
Assets held for sale		1,497		1,573						

The fair value of mortgage loans, including those classified as assets held for sale, is based on discounted contractual cash flows or, if the loans are impaired due to credit reasons, the fair value of collateral less costs to sell. Risk adjusted discount rates are selected using current rates at which similar loans would be made to borrowers with similar characteristics, using similar types of properties as collateral. The fair value of cost method limited partnerships is determined using reported net asset values of the underlying funds. The fair value of agent loans, which are reported in other investments, is based on discounted cash flow calculations that use discount rates with a spread over U.S. Treasury rates. Assumptions used in developing estimated cash

flows and discount rates consider the loan's credit and liquidity risks. The fair value of bank loans, which are reported in other investments or assets held for sale, is based on broker quotes from brokers familiar with the loans and current market conditions. The fair value of notes due from related party, which are reported in other investments, is based on discounted cash flow calculations using current interest rates for instruments with comparable terms. The fair value measurements for mortgage loans, cost method limited partnerships, agent loans, bank loans, notes due from related party and assets held for sale are categorized as Level 3.

Financial liabilities

(\$ in millions)	Septeml	ber 30	, 2013	Decemb	er 31	, 2012
	 Carrying		Fair	 Carrying		Fair
	value		value	value		value
Contractholder funds on investment contracts	\$ 15,670	\$	16,199	\$ 26,984	\$	27,989
Notes due to related parties	286		286	496		496
Liability for collateral	363		363	561		561
Liabilities held for sale	7,704		7,550			

The fair value of contractholder funds on investment contracts, including those classified as liabilities held for sale, is based on the terms of the underlying contracts utilizing prevailing market rates for similar contracts adjusted for the Company's own credit risk. Deferred annuities included in contractholder funds are valued using discounted cash flow models which incorporate market value margins, which are based on the cost of holding economic capital, and the Company's own credit risk. Immediate annuities without life contingencies and fixed rate funding agreements are valued at the present value of future benefits using market implied interest rates which include the Company's own credit risk. The fair value measurements for contractholder funds on investment contracts and liabilities held for sale are categorized as Level 3.

The fair value of notes due to related parties is based on discounted cash flow calculations using current interest rates for instruments with comparable terms and considers the Company's own credit risk. The liability for collateral is valued at carrying value due to its short-term nature. The fair value measurements for liability for collateral are categorized as Level 2. The fair value measurements for notes due to related parties are categorized as Level 3.

6. Derivative Financial Instruments

The Company uses derivatives to manage risks with certain assets and liabilities arising from the potential adverse impacts from changes in risk-free interest rates, changes in equity market valuations, increases in credit spreads and foreign currency fluctuations, and for asset replication. The Company does not use derivatives for

28

speculative purposes.

Asset-liability management is a risk management strategy that is principally employed to balance the respective interest-rate sensitivities of the Company's assets and liabilities. Depending upon the attributes of the assets acquired and liabilities issued, derivative instruments such as interest rate swaps, caps, swaptions and futures are utilized to change the interest rate characteristics of existing assets and liabilities to ensure the relationship is maintained within specified ranges and to reduce exposure to rising or falling interest rates. The Company uses financial futures and interest rate swaps to hedge anticipated asset purchases and liability issuances and futures and options for hedging the equity exposure contained in its equity indexed life and annuity product contracts that offer equity returns to contractholders. In addition, the Company uses interest rate swaps to hedge interest rate risk inherent in funding agreements. The Company uses foreign currency swaps and forwards primarily to reduce the foreign currency risk associated with issuing foreign currency denominated funding agreements and holding foreign currency denominated investments. Credit default swaps are typically used to mitigate the credit risk within the Company's fixed income portfolio.

Asset replication refers to the "synthetic" creation of assets through the use of derivatives and primarily investment grade host bonds to replicate securities that are either unavailable in the cash markets or more economical to acquire in synthetic form. The Company replicates fixed income securities using a combination of a credit default swap and one or more highly rated fixed income securities to synthetically replicate the economic characteristics of one or more cash market securities.

The Company also has derivatives embedded in non-derivative host contracts that are required to be separated from the host contracts and accounted for at fair value with changes in fair value of embedded derivatives reported in net income. The Company's primary embedded derivatives are equity options in life and annuity product contracts, which provide equity returns to contractholders; equity-indexed notes containing equity call options, which provide a coupon payout that is determined using one or more equity-based indices; credit default swaps in synthetic collateralized debt obligations, which provide enhanced coupon rates as a result of selling credit protection; and conversion options in fixed income securities, which provide the Company with the right to convert the instrument into a predetermined number of shares of common stock.

When derivatives meet specific criteria, they may be designated as accounting hedges and accounted for as fair value, cash flow, foreign currency fair value or foreign currency cash flow hedges. The Company designates certain of its interest rate and foreign currency swap contracts and certain investment risk transfer reinsurance agreements as fair value hedges when the hedging instrument is highly effective in offsetting the risk of changes in the fair value of the hedged item. The Company designates certain of its foreign currency swap contracts as cash flow hedges when the hedging instrument is highly effective in offsetting the exposure of variations in cash flows for the hedged risk that could affect net income. Amounts are reclassified to net investment income or realized capital gains and losses as the hedged item affects net income.

The notional amounts specified in the contracts are used to calculate the exchange of contractual payments under the agreements and are generally not representative of the potential for gain or loss on these agreements. However, the notional amounts specified in credit default swaps where the Company has sold credit protection represent the maximum amount of potential loss, assuming no recoveries.

Fair value, which is equal to the carrying value, is the estimated amount that the Company would receive or pay to terminate the derivative contracts at the reporting date. The carrying value amounts for OTC derivatives are further adjusted for the effects, if any, of enforceable master netting agreements and are presented on a net basis, by counterparty agreement, in the Condensed Consolidated Statements of Financial Position. For certain exchange traded and cleared derivatives, margin deposits are required as well as daily cash settlements of margin accounts. As of September 30, 2013, the Company pledged \$4 million of cash and securities in the form of margin deposits.

For those derivatives which qualify for fair value hedge accounting, net income includes the changes in the fair value of both the derivative instrument and the hedged risk, and therefore reflects any hedging ineffectiveness. For cash flow hedges, gains and losses are amortized from accumulated other comprehensive income and are reported in net income in the same period the forecasted transactions being hedged impact net income.

Non-hedge accounting is generally used for "portfolio" level hedging strategies where the terms of the individual hedged items do not meet the strict homogeneity requirements to permit the application of hedge

accounting. For non-hedge derivatives, net income includes changes in fair value and accrued periodic settlements, when applicable. With the exception of non-hedge derivatives used for asset replication and non-hedge embedded derivatives, all of the Company's derivatives are evaluated for their ongoing effectiveness as either accounting hedge or non-hedge derivative financial instruments on at least a quarterly basis.

The following table provides a summary of the volume and fair value positions of derivative instruments as well as their reporting location in the Condensed Consolidated Statement of Financial Position as of September 30, 2013.

(\$ in millions)	Gain (loss) on derivatives	Gain (loss) on hedged risk
Location of gain or (loss) recognized in net income on derivatives	 Interest rate contracts	 Investments
Three months ended September 30, 2012 Net investment income	\$ 1	\$ (1)
Nine months ended September 30, 2012 Net investment income	\$ 3	\$ (3)

The Company manages its exposure to credit risk by utilizing highly rated counterparties, establishing risk control limits, executing enforceable master netting agreements ("MNAs") and obtaining collateral where appropriate. The Company uses MNAs for OTC derivative transactions that permit either party to net payments due for transactions and collateral is either pledged or obtained when certain predetermined exposure limits are exceeded. As of September 30, 2013, counterparties pledged \$7 million in cash and securities to the Company, and the Company pledged \$23 million in securities to counterparties which includes \$13 million of collateral posted under MNAs for contracts containing credit-risk-contingent provisions that are in a liability position and \$10 million of collateral posted under MNAs for contracts without credit-risk-contingent liabilities. The Company has not incurred any losses on derivative financial instruments due to counterparty nonperformance. Other derivatives, including futures and certain option contracts, are traded on organized exchanges which require margin deposits and guarantee the execution of trades, thereby mitigating any potential credit risk.

33

Counterparty credit exposure represents the Company's potential loss if all of the counterparties concurrently fail to perform under the contractual terms of the contracts and all collateral, if any, becomes worthless. This exposure is measured by the fair value of OTC derivative contracts with a positive fair value at the reporting date reduced by the effect, if any, of enforceable master netting agreements.

The following table summarizes the counterparty credit exposure by counterparty credit rating as it relates to the Company's OTC derivatives.

(\$ in millions)		September 3	30, 2013			December	31, 2012	
Rating (1)	Number of counter- parties	Notional amount ⁽²⁾	Credit exposure (2)	Exposure, net of collateral (2)	Number of counter- parties	Notional amount (2)	Credit exposure (2)	Exposure, net of collateral (2)
A+	1 \$	21 \$	\$		1 \$	19 \$	\$	
A	3	32	2		3	2,252	12	
A-	3	135	1	1	2	311	1	1
BBB+	1	776	4	1	1	3,617	11	
Total	8 \$	964 \$	7 \$	2	7 \$	6,199 \$	24 \$	1

Market risk is the risk that the Company will incur losses due to adverse changes in market rates and prices. Market risk exists for all of the derivative financial instruments the Company currently holds, as these instruments may become less valuable due to adverse changes in market conditions. To limit this risk, the Company's senior management has established risk control limits. In addition, changes in fair value of the derivative financial instruments that the Company uses for risk management purposes are generally offset by the change in the fair value or cash flows of the hedged risk component of the related assets, liabilities or forecasted transactions.

Certain of the Company's derivative instruments contain credit-risk-contingent termination events, cross-default provisions and credit support annex agreements. Credit-risk-contingent termination events allow the counterparties to terminate the derivative on certain dates if ALIC's or Allstate Life

⁽¹⁾ Rating is the lower of S&P or Moody's ratings.
(2) Only OTC derivatives with a net positive fair value are included for each counterparty.

Insurance Company of New York's ("ALNY") financial strength credit ratings by Moody's or S&P fall below a certain level or in the event ALIC or ALNY are no longer rated by either Moody's or S&P. Credit-risk-contingent cross-default provisions allow the counterparties to terminate the derivative instruments if the Company defaults by pre-determined threshold amounts on certain debt instruments. Credit-risk-contingent credit support annex agreements specify the amount of collateral the Company must post to counterparties based on ALIC's or ALNY's financial strength credit ratings by Moody's or S&P, or in the event ALIC or ALNY are no longer rated by either Moody's or S&P.

The following summarizes the fair value of derivative instruments with termination, cross-default or collateral credit-risk-contingent features that are in a liability position, as well as the fair value of assets and collateral that are netted against the liability in accordance with provisions within enforceable MNAs.

(\$ in millions)	September 30, 2013	December 31, 2012
Gross liability fair value of contracts containing credit-risk-contingent features	\$ 26	\$ 62
Gross asset fair value of contracts containing credit-risk-contingent features and subject to MNAs	(12)	(28)
Collateral posted under MNAs for contracts containing credit-risk-contingent features	(13)	(25)
Maximum amount of additional exposure for contracts with credit-risk-contingent features if all features were triggered concurrently	\$ 1	\$ 9

Credit derivatives - selling protection

Free-standing credit default swaps ("CDS") are utilized for selling credit protection against a specified credit event. A credit default swap is a derivative instrument, representing an agreement between two parties to exchange the credit risk of a specified entity (or a group of entities), or an index based on the credit risk of a group of entities (all commonly referred to as the "reference entity" or a portfolio of "reference entities"), in return for a periodic premium. In selling protection, CDS are used to replicate fixed income securities and to complement the cash market when credit exposure to certain issuers is not available or when the derivative alternative is less expensive than the cash market alternative. CDS typically have a five-year term.

34

The following table shows the CDS notional amounts by credit rating and fair value of protection sold.

Total	\$	26	\$	131	\$	68	\$	5	\$	230	\$	(29)

⁽¹⁾ Investment grade corporate debt categorization is based on the rating of the underlying name(s) at initial purchase.

In selling protection with CDS, the Company sells credit protection on an identified single name, a basket of names in a first-to-default ("FTD") structure or a specific tranche of a basket, or credit derivative index ("CDX") that is generally investment grade, and in return receives periodic premiums through expiration or termination of the agreement. With single name CDS, this premium or credit spread generally corresponds to the difference between the yield on the reference entity's public fixed maturity cash instruments and swap rates at the time the agreement is executed. With a FTD basket or a tranche of a basket, because of the additional credit risk inherent in a basket of named reference entities, the premium generally corresponds to a high proportion of the sum of the credit spreads of the names in the basket and the correlation between the names. CDX is utilized to take a position on multiple (generally 125) reference entities. Credit events are typically defined as bankruptcy, failure to pay, or restructuring, depending on the nature of the reference entities. If a credit event occurs, the Company settles with the counterparty, either through physical settlement or cash settlement. In a physical settlement, a reference asset is delivered by the buyer of protection to the Company, in exchange for cash payment at par, whereas in a cash settlement, the Company pays the difference between par and the prescribed value of the reference asset. When a credit event occurs in a single name or FTD basket (for FTD, the first credit event occurring for any one name in the basket), the contract terminates at the time of settlement. When a credit event occurs in a tranche of a basket, there is no immediate impact to the Company until cumulative losses in the basket exceed the contractual subordination. To date, realized losses have not exceeded the subordination. For CDX, the reference entity's name incurring the credit event is removed from the index while the contract continues until expiration. The maximum payo

In addition to the CDS described above, the Company's synthetic collateralized debt obligations contain embedded credit default swaps which sell protection on a basket of reference entities. The synthetic collateralized debt obligations are fully funded; therefore, the Company is not obligated to contribute additional funds when credit events occur related to the reference entities named in the embedded credit default swaps. The Company's maximum amount at risk equals the amount of its aggregate initial investment in the synthetic collateralized debt obligations.

7. Reinsurance

The effects of reinsurance on premiums and contract charges are as follows:

8. Guarantees and Contingent Liabilities

Guaranty funds

Under state insurance guaranty fund laws, insurers doing business in a state can be assessed, up to prescribed limits, for certain obligations of insolvent insurance companies to policyholders and claimants. Amounts assessed to each company are typically related to its proportion of business written in each state. The Company's policy is to accrue assessments when the entity for which the insolvency relates has met its state of domicile's statutory definition of insolvency and the amount of the loss is reasonably estimable. In most states, the definition is met with a declaration of financial insolvency by a court of competent jurisdiction. In certain states there must also be a final order of liquidation.

The Executive Life Insurance Company of New York ("ELNY") liquidation was closed on August 8, 2013. During second and third quarter 2013, the Company received and paid assessments from certain state guaranty associations. The Company previously accrued a liability for the Company's estimated aggregate exposure for

36

guaranty fund assessments and participation in an industry sponsored plan to supplement certain ELNY policyholders. The ultimate cost will depend on the level of guaranty fund system participation and the realization of tax benefits. Under current law, the Company may be allowed to recoup a portion of the amount of any additional guaranty fund assessment in periods subsequent to the recognition of the assessment by offsetting future state related taxes.

The Company owns certain fixed income securities that obligate the Company to exchange credit risk or to forfeit principal due, depending on the nature or occurrence of specified credit events for the reference entities. In the event all such specified credit events were to occur, the Company's maximum amount at risk on these fixed income securities, as measured by the amount of the aggregate initial investment, was \$4 million as of September 30, 2013. The obligations associated with these fixed income securities expire at various dates on or before March 11, 2018.

Related to the disposal through reinsurance of substantially all of the Company's variable annuity business to Prudential in 2006, the Company and the Corporation have agreed to indemnify Prudential for certain pre-closing contingent liabilities (including extra-contractual liabilities of the Company and liabilities specifically excluded from the transaction) that the Company has agreed to retain. In addition, the Company and the Corporation will each indemnify Prudential for certain post-closing liabilities that may arise from the acts of the Company and its agents, including in connection with the Company's provision of transition services. The reinsurance agreements contain no limitations or indemnifications with regard to insurance risk transfer, and transferred all of the future risks and responsibilities for performance on the underlying variable annuity contracts to Prudential, including those related to benefit guarantees. Management does not believe this agreement will have a material effect on results of operations, cash flows or financial position of the Company.

In the normal course of business, the Company provides standard indemnifications to contractual counterparties in connection with numerous transactions, including acquisitions and divestitures. The types of indemnifications typically provided include indemnifications for breaches of representations and warranties, taxes and certain other liabilities, such as third party lawsuits. The indemnification clauses are often standard contractual terms and are entered into in the normal course of business based on an assessment that the risk of loss would be remote. The terms of the indemnifications vary in duration and nature. In many cases, the maximum obligation is not explicitly stated and the contingencies triggering the obligation to indemnify have not occurred and are not expected to occur. Consequently, the maximum amount of the obligation under such indemnifications is not determinable. Historically, the Company has not made any material payments pursuant to these obligations.

The aggregate liability balance related to all guarantees was not material as of September 30, 2013.

Regulation and Compliance

The Company is subject to changing social, economic and regulatory conditions. From time to time, regulatory authorities or legislative bodies seek to impose additional regulations regarding agent and broker compensation, regulate the nature of and amount of investments, and otherwise expand overall regulation of insurance products and the insurance industry. The Company has established procedures and policies to facilitate compliance with laws and regulations, to foster prudent business operations, and to support financial reporting. The Company routinely reviews its practices to validate compliance with laws and regulations and with internal procedures and policies. As a result of these reviews, from time to time the Company may decide to modify some of its procedures and policies. Such modifications, and the reviews that led to them, may be accompanied by payments being made and costs being incurred. The ultimate changes and eventual effects of these actions on the Company's business, if any, are uncertain.

The Company is currently being examined by certain states for compliance with unclaimed property laws. It is possible that this examination may result in additional payments of abandoned funds to states and to changes in the Company's practices and procedures for the identification of escheatable funds, which could impact benefit payments and reserves, among other consequences; however, it is not likely to have a material effect on the condensed consolidated financial statements of the Company.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholder of Allstate Life Insurance Company Northbrook, IL 60062

We have reviewed the accompanying condensed consolidated statement of financial position of Allstate Life Insurance Company and subsidiaries (the "Company"), an affiliate of The Allstate Corporation, as of September 30, 2013, and the related condensed consolidated statements of operations and comprehensive income for the three-month and nine-month periods ended September 30, 2013 and 2012, and of shareholder's equity and cash flows for the nine-month periods ended September 30, 2013 and 2012. These interim financial statements are the responsibility of the Company's management.

We conducted our reviews in accordance with the standards of the Public Company Accounting Oversight Board (United States). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States), the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our reviews, we are not aware of any material modifications that should be made to such condensed consolidated interim financial statements for them to be in conformity with accounting principles generally accepted in the United States of America.

We have previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated statement of financial position of Allstate Life Insurance Company and subsidiaries as of December 31, 2012, and the related consolidated statements of operations and comprehensive income, shareholder's equity, and cash flows for the year then ended (not presented herein); and in our report dated March 8, 2013, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying condensed consolidated statement of financial position as of December 31, 2012 is fairly stated, in all material respects, in relation to the consolidated statement of financial position from which it has been derived.

Item 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS FOR THE THREE-MONTH AND NINE-MONTH PERIODS ENDED SEPTEMBER 30, 2013 AND 2012

OVERVIEW

The following discussion highlights significant factors influencing the consolidated financial position and results of operations of Allstate Life Insurance Company (referred to in this document as "we," "our," "us," or the "Company"). It should be read in conjunction with the condensed consolidated financial statements and notes thereto found under Part I. Item 1. contained herein, and with the discussion, analysis, consolidated financial statements and notes thereto in Part I. Item 1. and Part II. Item 7. and Item 8. of the Allstate Life Insurance Company Annual Report on Form 10-K for 2012. We operate as a single segment entity based on the manner in which we use financial information to evaluate business performance and to determine the allocation of resources.

OPERATIONS HIGHLIGHTS

- Net loss was \$394 million and \$135 million in the third quarter and first nine months of 2013, respectively, compared to net income of \$103 million and \$284 million in the third quarter and first nine months of 2012, respectively.
- Premiums and contract charges on underwritten products, including traditional life, interest-sensitive life and accident and health insurance, totaled \$399 million in the third quarter of 2013, an increase of 2.0% from \$391 million in the third quarter of 2012, and \$1.20 billion in the first nine months of 2013, an increase of 2.8% from \$1.16 billion in the first nine months of 2012.
- · Investments totaled \$38.44 billion as of September 30, 2013, reflecting a decrease of \$17.43 billion from \$55.87 billion as of December 31, 2012. Investments classified as held for sale totaled \$12.24 billion as of September 30, 2013. Net investment income of \$621 million in the third quarter of 2013 was comparable to the third quarter of 2012 and decreased 4.3% to \$1.86 billion in the first nine months of 2013 from \$1.94 billion in the first nine months of 2012.
- · Net realized capital losses totaled \$16 million in the third quarter of 2013 compared to \$57 million in the third quarter of 2012, and net realized capital gains totaled \$61 million in the first nine months of 2013 compared to net realized capital losses of \$72 million in the first nine months of 2012.
- During third quarter 2013, a \$54 million pre-tax charge to income was recorded related to our annual comprehensive review of the DAC, deferred sales inducement costs and secondary guarantee liability balances. This compares to a \$25 million pre-tax charge to income in the third quarter of 2012.
- · During third quarter 2013, a loss on disposition of \$475 million, after-tax, was recorded relating to the sale of Lincoln Benefit Life Company.
- · Contractholder funds totaled \$23.78 billion as of September 30, 2013, reflecting a decrease of \$14.85 billion from \$38.63 billion as of December 31, 2012. Contractholder funds classified as held for sale totaled \$11.28 billion as of September 30, 2013.

IMPACT OF LOW INTEREST RATE ENVIRONMENT

The low interest rate environment in the U.S. has resulted in our current reinvestment yields being lower than the overall portfolio income yield, primarily for our investments in fixed income securities and commercial mortgage loans. During 2012, the Federal Reserve Board announced its decision to keep interest rates low through at least 2014 and to increase the prominence of the unemployment rate as an input to monetary policy decisions. More recent announcements in 2013 have begun to foreshadow the potential tapering of large-scale purchases of longer-term Treasury and agency mortgage-backed securities in the open market. The Federal Open Market Committee has also reiterated that it expects a highly accommodative stance of monetary policy to remain appropriate for a considerable time after the asset purchase program ends and the economic recovery strengthens. Despite the measured commentary and assurances around monetary policy remaining accommodative, interest rates have risen in 2013 and risk markets have become more volatile. We

anticipate that interest rates will continue to increase but remain below historic averages and the portfolio income yield for some period. We also expect capital markets to remain volatile while they adjust to a new equilibrium.

Deferred annuity contracts with fixed and guaranteed crediting rates, or floors that limit crediting rate reductions, are adversely impacted by a prolonged low interest rate environment since we may not be able to reduce crediting rates sufficiently to maintain investment spreads. Financial results of long duration products that do not have stated crediting rate guarantees but for which underlying assets may have to be reinvested at interest rates that are lower than portfolio rates, such as structured settlements and term life insurance, may also be adversely impacted.

40

The following table summarizes the weighted average guaranteed crediting rates and weighted average current crediting rates as of September 30, 2013 for certain fixed annuities and interest-sensitive life contracts where management has the ability to change the crediting rate, subject to a contractual minimum. Other products, including equity-indexed, variable and immediate annuities, equity-indexed and variable life, and institutional products totaling \$6.28 billion of contractholder funds, have been excluded from the analysis because management does not have the ability to change the crediting rate or the minimum crediting rate is not considered meaningful in this context.

(\$ in millions)		Weighted			
	Weighted	average			
	average	current	~		
	guaranteed	crediting	Contractholder		
	crediting rates	rates	funds		
Annuities with annual crediting rate resets	2.87 %	2.88 %	\$6,749		
Annuities with multi-year rate guarantees (1):					
Resettable in next 12 months	1.18	4.17	1,292		
Resettable after 12 months	1.22	3.46	2,593		
Interest-sensitive life insurance	4.00	4.16	6,870		

⁽¹⁾ These contracts include interest rate guarantee periods which are typically 5 or 6 years.

Investing activity will continue to decrease our portfolio yield as long as market yields remain below the current portfolio yield. The portfolio yield has been less impacted by reinvestment in the current low interest rate environment, as much of the investment cash flows have been used to fund the managed reduction in spread-based liabilities. The declines in both invested assets and portfolio yield are expected to result in lower net investment income in future periods.

We expect approximately 5.6% of the amortized cost of fixed income securities not subject to prepayment and approximately 12.3% of commercial mortgage loans to mature through 2014. We have \$25.18 billion of such fixed income securities and \$4.26 billion of such commercial mortgage loans as of September 30, 2013. Additionally, for asset-backed securities ("ABS"), residential mortgage-backed securities ("RMBS") and commercial mortgage-backed securities ("CMBS") that have the potential for prepayment and are therefore not categorized by contractual maturity, we received periodic principal payments of \$1.20 billion in the first nine months of 2013. To the extent portfolio cash flows are reinvested, the average pre-tax investment yield of 5.1% is expected to decline due to lower market yields.

In order to mitigate the unfavorable impact that the current interest rate environment has on investment results, we are:

- · Optimizing return and risk in an uncertain economic climate and volatile investment market.
- · Shifting the portfolio mix in the next few years to have less reliance on lending to borrowers and a greater proportion of ownership of assets including real estate and other cash-generating assets.
- · Managing the alignment of assets with respect to our changing liability profile.

These topics are discussed in more detail in the respective sections of the MD&A.

OPERATIONS

Strategic actions

On July 17, 2013, we announced plans to exit the independent master brokerage agencies distribution channel. In connection with this announcement, on July 17, 2013, we entered into a definitive agreement with Resolution Life Holdings, Inc. to sell Lincoln Benefit Life Company ("LBL"), LBL's life insurance business generated through independent master brokerage agencies, and all of LBL's deferred fixed annuity and long-term care insurance business for \$600 million subject to certain adjustments as of the closing date. The transaction is subject to regulatory approvals and other customary closing conditions. We expect the closing to occur during the first quarter of 2014. The estimated loss on disposition of \$475 million, after-tax, was recorded in third quarter 2013. The

41

business being sold had \$341 million of premiums and contract charges in 2012. Effective July 18, 2013, we no longer offer any products through the independent master brokerage agency distribution channel.

Effective January 1, 2014, we will no longer offer fixed annuities. Allstate exclusive agencies and exclusive financial specialists will have non-proprietary fixed annuities available to sell.

We are planning to outsource the administration of our annuity business to a third party administration company by the end of 2014. We expect to have restructuring expense charges relating to these changes in late 2013 and into 2014.

Summary analysis Summarized financial data is presented in the following table.

Premiums Contract charges Net investment income Realized capital gains and losses	\$ 147 264 621	\$ 145 261 621	\$	442 788 1,861 61	\$ 443 772 1,944
Total revenues	 1,016	 (57) 970		3,152	 (72) 3,087
Costs and expenses Contract benefits Interest credited to contractholder funds Amortization of DAC Operating costs and expenses Restructuring and related charges Interest expense	 (422) (310) (73) (102) (4) (4)	 (376) (208) (128) (111) (12)		(1,199) (953) (177) (333) (6) (19)	(1,128) (939) (268) (332) (34)
Total costs and expenses	(915)	(835)		(2,687)	(2,701)
(Loss) gain on disposition of operations Income tax benefit (expense) Net (loss) income	\$ (646) 151 (394)	\$ 9 (41) 103	<u> </u>	(643) 43 (135)	\$ 15 (117) 284

Net loss was \$394 million in the third quarter of 2013 compared to net income of \$103 million in the third quarter of 2012. The unfavorable change was primarily due to the loss on disposition related to the LBL sale and higher interest credited to contractholder funds, partially offset by decreased amortization of DAC and lower net realized capital losses.

Net loss was \$135 million in the first nine months of 2013 compared to net income of \$284 million in the first nine months of 2012. The unfavorable change was primarily due to the loss on disposition related to the LBL sale and lower net investment income, partially offset by net realized capital gains in the first nine months of 2013 compared to net realized capital losses in the first nine months of 2012 and decreased amortization of DAC.

Analysis of revenues Total revenues increased 4.7% or \$46 million in the third quarter of 2013 compared to the third quarter of 2012, primarily due to lower net realized capital losses. Total revenues increased 2.1% or \$65 million in the first nine months of 2013 compared to the first nine months of 2012, primarily due to net realized capital gains in the first nine months of 2013 compared to net realized capital losses in the first nine months of 2012, partially offset by lower net investment income.

Premiums represent revenues generated from traditional life insurance, immediate annuities with life contingencies, and accident and health insurance products that have significant mortality or morbidity risk.

Contract charges are revenues generated from interest-sensitive and variable life insurance and fixed annuities for which deposits are classified as contractholder funds or separate account liabilities. Contract charges are assessed against the contractholder account values for maintenance, administration, cost of insurance and surrender prior to contractually specified dates.

42

The following table summarizes premiums and contract charges by product.

(\$ in millions)		Three me Septe		Nine months ended September 30,					
		2013		2012		2013		2012	
Underwritten products									
Traditional life insurance premiums	\$	114	\$	111	\$	342	\$	334	
Accident and health insurance premiums		27		24		78		73	
Interest-sensitive life insurance contract charges		258		256		775		756	
Subtotal	_	399		391		1,195		1,163	
Annuities									
Immediate annuities with life contingencies premiums		6		10		22		36	
Other fixed annuity contract charges		6		5		13		16	
Subtotal	_	12	_	15	_	35		52	
Premiums and contract charges (1)	\$ <u></u>	411	\$	406	\$	1,230	\$	1,215	

⁽¹⁾ Contract charges related to the cost of insurance totaled \$180 million and \$178 million for the third quarter of 2013 and 2012, respectively, and \$533 million and \$514 million in the first nine months of 2013 and 2012, respectively.

Total premiums and contract charges increased 1.2% in both the third quarter and the first nine months of 2013 compared to the same periods of 2012, primarily due to higher contract charges on interest-sensitive life insurance products primarily resulting from the growth of insurance in force and the aging of our policyholders and higher traditional life insurance premiums, partially offset by lower sales of immediate annuities with life contingencies. Effective March 22, 2013, we no longer offer structured settlement annuities. We continue to service the in-force structured settlement contracts.

Contractholder funds, ending balance \$	23,779	\$ 39,430	\$ 23,779	\$ 39,430

⁽¹⁾ The table above illustrates the changes in contractholder funds, which are presented gross of reinsurance recoverables on the Condensed Consolidated Statements of Financial Position. The table above is intended to supplement our discussion and analysis of revenues, which are presented net of reinsurance on the Condensed Consolidated Statements of Operations and Comprehensive Income. As a result, the net change in contractholder funds associated with products reinsured to third parties is reflected as a component of the other adjustments line.

Contractholder funds decreased 33.3% and 38.5% in the third quarter and first nine months of 2013, respectively, compared to decreases of 1.8% and 5.4% in the same periods of 2012, respectively, reflecting the reclassification of contractholder funds held for sale relating to the LBL sale. Contractholder funds including those classified as held for sale decreased 1.7% and 9.2% in the third quarter and first nine months of 2013, respectively, reflecting a large institutional product maturity in second quarter 2013 and our continuing strategy to reduce our concentration in spread-based products. Average contractholder funds decreased 25.3% and 23.0% in the third quarter and first nine months of 2013, respectively, compared to the same periods of 2012.

Contractholder deposits decreased 8.7% in the third quarter of 2013 compared to the third quarter of 2012, primarily due to decreased fixed annuity deposits driven by elevated deposits in third quarter 2012 when new equity-indexed annuity products were launched. Contractholder deposits increased 14.7% in the first nine months of 2013 compared to the first nine months of 2012, primarily due to increased fixed annuity deposits driven by the new equity-indexed annuity products and higher deposits on immediate annuities.

Maturities of and interest payments on institutional products in the first nine months of 2013 include a \$1.75 billion maturity. There are \$85 million of institutional products outstanding as of September 30, 2013.

Surrenders and partial withdrawals on deferred fixed annuities and interest-sensitive life insurance products decreased 14.3% to \$802 million in the third quarter of 2013 and 10.3% to \$2.53 billion in the first nine months of 2013 from \$936 million and \$2.82 billion in the third quarter and first nine months of 2012, respectively. The annualized surrender and partial withdrawal rate on deferred fixed annuities and interest-sensitive life insurance products, based on the beginning of year contractholder funds, was 10.7% and 10.9% in the first nine months of 2013 and 2012, respectively.

44

Analysis of costs and expenses Total costs and expenses increased 9.6% or \$80 million in the third quarter of 2013 compared to the same period of 2012, primarily due to higher interest credited to contractholder funds and contract benefits, partially offset by lower amortization of DAC. Total costs and expenses decreased 0.5% or \$14 million in the first nine months of 2013 compared to the same period of 2012, primarily due to lower amortization of DAC, partially offset by higher contract benefits and interest credited to contractholder funds.

Contract benefits increased 12.2% or \$46 million in the third quarter of 2013 compared to the same period of 2012, primarily due to an increase in reserves for secondary guarantees on interest-sensitive life insurance and worse mortality experience on annuities, partially offset by better mortality experience on life insurance. Contract benefits increased 6.3% or \$71 million in the first nine months of 2013 compared to the same period of 2012, primarily due to an increase in reserves for secondary guarantees on interest-sensitive life insurance and worse mortality experience on life insurance.

Our annual review of assumptions in third quarter 2013 resulted in a \$37 million increase in reserves primarily for secondary guarantees on interest-sensitive life insurance due to higher concentration of and increased projected exposure to secondary guarantees. In the third quarter of 2012, the review resulted in a \$13 million decrease in the reserves for secondary guarantees on interest-sensitive life insurance due to favorable projected mortality.

We analyze our mortality and morbidity results using the difference between premiums and contract charges earned for the cost of insurance and contract benefits excluding the portion related to the implied interest on immediate annuities with life contingencies ("benefit spread"). This implied interest totaled \$133 million and \$396 million in the third quarter and first nine months of 2013, respectively, compared to \$135 million and \$405 million in the third quarter and first nine months of 2012, respectively.

The benefit spread by product group is disclosed in the following table.

(\$ in millions)	Three mon	nths ended	Nine mon	ths ended		
	Septem	iber 30,	September 30,			
	2013	2012	2013	2012		

Life insurance	\$ 57	\$ 87 5	\$ 212	\$ 258
Accident and health insurance	3	8	15	22
Annuities	(22)	(13)	(55)	(46)
Total benefit spread	\$ 38	\$ 82	\$ 172	\$ 234

Benefit spread decreased 53.7% or \$44 million in the third quarter of 2013 compared to the same period of 2012, primarily due to the increase in reserves for secondary guarantees on interest-sensitive life insurance and worse mortality experience on annuities, partially offset by better mortality experience on life insurance. Benefit spread decreased 26.5% or \$62 million in the first nine months of 2013 compared to the same period of 2012, primarily due to the increase in reserves for secondary guarantees on interest-sensitive life insurance and worse mortality experience on life insurance and annuities.

Interest credited to contractholder funds increased 49.0% or \$102 million in the third quarter of 2013 and 1.5% or \$14 million in the first nine months of 2013 compared to the same periods of 2012, primarily due to the valuation change on derivatives embedded in equity-indexed annuity contracts that reduced interest credited expense in third quarter 2012, partially offset by lower average contractholder funds and lower interest crediting rates. Valuation changes on derivatives embedded in equity-indexed annuity contracts that are not hedged increased interest credited to contractholder funds by \$17 million and \$21 million in the third quarter and first nine months of 2013, respectively, compared to decreases of \$149 million and \$135 million in the third quarter and first nine months of 2012, respectively. During third quarter 2012, we reviewed the significant valuation inputs for these embedded derivatives and reduced the projected option cost to reflect management's current and anticipated crediting rate setting actions, which were informed by the existing and projected low interest rate environment and are consistent with our strategy to reduce exposure to spread-based business. The reduction in projected interest rates resulted in a reduction of contractholder funds and interest credited expense by \$169 million in third quarter 2012.

In order to analyze the impact of net investment income and interest credited to contractholders on net income, we monitor the difference between net investment income and the sum of interest credited to contractholder funds and the implied interest on immediate annuities with life contingencies, which is included as a component of contract benefits on the Condensed Consolidated Statements of Operations and Comprehensive Income ("investment spread").

45

The investment spread by product group is shown in the following table.

(\$ in millions)	Three m Septe	onths mber		Nine mo Septe		
	 2013		2012	 2013		2012
Annuities and institutional products	\$ 99	\$	39	\$ 242	\$	205
Life insurance	25		26	78		65
Accident and health insurance	4		4	11		10
Net investment income on investments supporting capital	67		60	202		185
Investment spread before valuation changes on embedded						
derivatives that are not hedged	195		129	533		465
Valuation changes on derivatives embedded in equity-indexed						
annuity contracts that are not hedged	(17)		149	(21)		135
Total investment spread	\$ 178	\$	278	\$ 512	\$	600

Investment spread before valuation changes on embedded derivatives that are not hedged increased 51.2% or \$66 million in the third quarter of 2013 compared to the same period of 2012 primarily due to higher limited partnership income, lower crediting rates, and higher prepayment fee income and litigation proceeds, partially offset by the continued managed reduction in our spread-based business in force. Investment spread before valuation changes on embedded derivatives that are not hedged increased 14.6% or \$68 million in the first nine months of 2013 compared to the same period of 2012 primarily due to lower crediting rates and higher prepayment fee income and litigation proceeds, partially offset by lower limited partnership income and the continued managed reduction in our spread-based business in force.

To further analyze investment spreads, the following table summarizes the weighted average investment yield on assets supporting product liabilities and capital, interest crediting rates and investment spreads. For purposes of these calculations, investments, reserves and contractholder funds classified as held for sale are included.

Amortization of DAC decreased 43.0% or \$55 million in the third quarter of 2013 and 34.0% or \$91 million in the first nine months of 2013 compared to the same periods of 2012. The components of amortization of DAC are summarized in the following table.

(\$ in millions)	Three mo Septer	 	Nine months ended September 30,				
	2013	2012	 2013		2012		
Amortization of DAC before amortization relating to realized capital gains and losses, valuation changes on embedded derivatives that are not hedged and changes in assumptions (Accretion) amortization relating to realized capital gains and losses ⁽¹⁾ and valuation changes on embedded derivatives that	\$ 58	\$ 59	\$ 157	\$	183		
are not hedged Amortization acceleration for changes in assumptions ("DAC	(3)	35	2		51		
unlocking")	18	34	18		34		
Total amortization of DAC	\$ 73	\$ 128	\$ 177	\$	268		

⁽¹⁾ The impact of realized capital gains and losses on amortization of DAC is dependent upon the relationship between the assets that give rise to the gain or loss and the product liability supported by the assets. Fluctuations result from changes in the impact of realized capital gains and losses on actual and expected gross profits.

The decrease in DAC amortization in the third quarter and first nine months of 2013 compared to the same periods of 2012 was primarily due to decreased amortization relating to valuation changes on embedded derivatives that are not hedged, decreased amortization on interest-sensitive life insurance resulting from decreased benefit spread, and decreased amortization acceleration for changes in assumptions. (Accretion) amortization relating to valuation changes on derivatives embedded in equity-indexed annuity contracts was \$(3) million in third quarter 2013, compared to \$26 million in third quarter 2012.

Our annual comprehensive review of the profitability of our products to determine DAC balances for our interest-sensitive life, fixed annuities and other investment contracts covers assumptions for persistency, mortality, expenses, investment returns, including capital gains and losses, interest crediting rates to policyholders, and the effect of any hedges in all product lines. In the third quarter of 2013, the review resulted in an acceleration of DAC amortization (charge to income) of \$18 million. Amortization acceleration of \$33 million related to interest-sensitive life insurance and was primarily due to an increase in projected mortality and expenses, partially offset by increased projected investment margins. Amortization deceleration of \$12 million related to fixed annuities and was

47

primarily due to an increase in projected investment margins. Amortization deceleration of \$3 million related to variable life insurance.

In the third quarter of 2012, the review resulted in an acceleration of DAC amortization of \$34 million. Amortization acceleration of \$38 million related to variable life insurance and was primarily due to an increase in projected mortality. Amortization acceleration of \$4 million related to fixed annuities and was primarily due to lower projected investment returns. Amortization deceleration of \$8 million related to interest-sensitive life insurance and was primarily due to an increase in projected persistency.

The following table provides the effect on DAC amortization of changes in assumptions relating to the gross profit components of investment margin, benefit margin and expense margin for the nine months ended September 30.

 (\$ in millions)
 2013
 2012

 Investment margin
 \$ (22)
 \$ 3

Benefit margin	13	33
Expense margin	27	(2)
Net acceleration	\$ 18 \$	34

Operating costs and expenses decreased 8.1% or \$9 million in the third quarter of 2013 compared to the third quarter of 2012. Operating costs and expenses in the first nine months of 2013 were comparable to the first nine months of 2012. The following table summarizes operating costs and expenses.

(\$ in millions)		Three me Septe	Nine months ended September 30,			
	<u> </u>	2013	2012	 2013		2012
Non-deferrable commissions	\$	7	\$ 9	\$ 20	\$	26
General and administrative expenses		85	92	282		276
Taxes and licenses		10	10	31		30
Total operating costs and expenses	\$	102	\$ 111	\$ 333	\$	332
Restructuring and related charges	\$	4	\$ 	\$ 6	\$	

General and administrative expenses decreased 7.6% or \$7 million in the third quarter of 2013 compared to the same period of 2012 primarily due to lower employee related expenses and proceeds received from a litigation settlement. General and administrative expenses increased 2.2% or \$6 million in the first nine months of 2013 compared to the same period of 2012 primarily due to higher employee related costs.

48

INVESTMENTS HIGHLIGHTS

- · Investments totaled \$38.44 billion as of September 30, 2013, decreasing from \$55.87 billion as of December 31, 2012. Investments classified as held for sale totaled \$12.24 billion as of September 30, 2013.
- Unrealized net capital gains totaled \$1.82 billion as of September 30, 2013, decreasing from \$3.70 billion as of December 31, 2012.
- Net investment income was \$621 million in the third quarter of 2013, comparable to the third quarter of 2012, and \$1.86 billion in the first nine months of 2013, a decrease of 4.12% from \$1.94 billion in the first nine months of 2012.
- Net realized capital losses were \$16 million in the third quarter of 2013 compared to \$57 million in the third quarter of 2012, and net realized capital gains were \$61 million in the first nine months of 2013 compared to net realized capital losses of \$72 million in the first nine months of 2012.

INVESTMENTS

The composition of the investment portfolio as of September 30, 2013 is presented in the following table.

(\$ in millions)		Percent to total
Fixed income securities (1)	\$ 29,335	76.3 %
Mortgage loans	4,264	11.1
Equity securities (2)	631	1.7
Limited partnership interests (3)	2,044	5.3
Short-term investments (4)	511	1.3
Policy loans	624	1.6
Other	1,027	2.7
Total	\$ 38,436	100.0 %

⁽¹⁾ Fixed income securities are carried at fair value. Amortized cost basis for these securities was \$27.80 billion.

Total investments decreased to \$38.44 billion as of September 30, 2013, from \$55.87 billion as of December 31, 2012, primarily due to the investments relating to the LBL sale being reclassified to held for sale. Total investments including those classified as held for sale were \$50.68 billion as of September 30, 2013, a decrease of \$5.19 billion from December 31, 2012 reflecting net reductions in contractholder funds and lower fixed income valuations. The decline in valuation of fixed income securities for the nine months ended September 30, 2013 was primarily due to increasing risk-free interest rates

Fixed income securities by type are listed in the following table.

(\$ in millions)	 Fair value as of September 30, 2013	Percent to total investments		Fair value as of December 31, 2012	Percent to total investments

Municipal bonds, including taxable and ARS securities, totaled \$3.41 billion as of September 30, 2013 with an unrealized net capital gain of \$226 million. The municipal bond portfolio includes general obligations of state and local issuers and revenue bonds (including pre-refunded bonds, which are bonds for which an irrevocable trust has been established to fund the remaining payments of principal and interest).

Corporate bonds, including publicly traded and privately placed, totaled \$21.60 billion as of September 30, 2013, with an unrealized net capital gain of \$1.05 billion. Privately placed securities primarily consist of corporate issued senior debt securities that are directly negotiated with the borrower or are in unregistered form.

ABS, RMBS and CMBS are structured securities that are primarily collateralized by consumer or corporate borrowings and residential and commercial real estate loans. The cash flows from the underlying collateral paid to the securitization trust are generally applied in a pre-determined order and are designed so that each security issued by the trust, typically referred to as a "class", qualifies for a specific original rating. For example, the "senior" portion or "top" of the capital structure, or rating class, which would originally qualify for a rating of Aaa typically has priority in receiving principal repayments on the underlying collateral and retains this priority until the class is paid in full. In a sequential structure, underlying collateral principal repayments are directed to the most senior rated Aaa class in the structure until paid in full, after which principal repayments are directed to the next most senior Aaa class in the

structure until it is paid in full. Senior Aaa classes generally share any losses from the underlying collateral on a pro-rata basis after losses are absorbed by classes with lower original ratings. The payment priority and class subordination included in these securities serves as credit enhancement for holders of the senior or top portions of the structures. These securities continue to retain the payment priority features that existed at the origination of the securitization trust. Other forms of credit enhancement may include structural features embedded in the securitization trust, such as overcollateralization, excess spread and bond insurance. The underlying collateral can have fixed interest rates, variable interest rates (such as adjustable rate mortgages) or may contain features of both fixed and variable rate mortgages.

ABS, including CDO and Consumer and other ABS, totaled \$938 million as of September 30, 2013, with 93.5% rated investment grade and an unrealized net capital loss of \$4 million. Credit risk is managed by monitoring the performance of the underlying collateral. Many of the securities in the ABS portfolio have credit enhancement with features such as overcollateralization, subordinated structures, reserve funds, guarantees and/or insurance.

CDO totaled \$642 million as of September 30, 2013, with 91.7% rated investment grade and an unrealized net capital loss of \$14 million. CDO consist of obligations collateralized by cash flow CDO, which are structures collateralized primarily by below investment grade senior secured corporate loans.

Consumer and other ABS totaled \$296 million as of September 30, 2013, with 97.3% rated investment grade and an unrealized net capital gain of \$10 million.

RMBS, including U.S. Agency, Prime, Alt-A and Subprime, totaled \$939 million as of September 30, 2013, with 51.3% rated investment grade and an unrealized net capital gain of \$36 million. The RMBS portfolio is subject to interest rate risk, but unlike other fixed income securities, is additionally subject to significant prepayment risk from the underlying residential mortgage loans. The credit risk associated with the U.S. Agency portfolio is mitigated because they were issued by or have underlying collateral guaranteed by U.S. government agencies. Prime are collateralized by residential mortgage loans issued to prime borrowers. Alt-A includes securities collateralized by residential mortgage loans issued to borrowers who do not qualify for prime financing terms due to high loan-to-value ratios or limited supporting documentation, but have stronger credit profiles than subprime borrowers. Subprime includes securities collateralized by residential mortgage loans issued to borrowers that cannot qualify for Prime or Alt-A financing terms due in part to weak or limited credit history. It also includes securities that are collateralized by certain second lien mortgages regardless of the borrower's credit history. The Subprime portfolio consisted of \$75 million and \$71 million of first lien and second lien securities, respectively. The Subprime portfolio unrealized net capital loss of \$8 million as of September 30, 2013 was the result of wider credit spreads than at initial purchase. Wider spreads are largely due to the risk associated with the underlying collateral supporting certain Subprime securities.

CMBS totaled \$806 million as of September 30, 2013, with 68.1% rated investment grade and an unrealized net capital gain of \$30 million. The CMBS portfolio is subject to credit risk and has a sequential paydown structure. Of the CMBS investments, 98.3% are traditional conduit transactions collateralized by commercial mortgage loans, broadly diversified across property types and geographical area. The remainder consists of non-traditional CMBS such as small balance transactions, large loan pools and single borrower transactions.

51

Mortgage loans Our mortgage loan portfolio totaled \$4.26 billion as of September 30, 2013, and primarily comprises loans secured by first mortgages on developed commercial real estate. Key considerations used to manage our exposure include property type and geographic diversification. For further detail on our mortgage loan portfolio, see Note 4 of the condensed consolidated financial statements.

Limited partnership interests consist of investments in private equity/debt funds, real estate funds, tax credit funds and other funds. The limited partnership interests portfolio is well diversified across a number of characteristics including fund managers, vintage years, strategies, geography (including international), and company/property types. The following table presents information about our limited partnership interests as of September 30, 2013.

(\$ in millions)	Private equity/debt funds (1)	Real estate funds	Tax credit funds	Other funds	Total

26 (10) 28 (10) **Unrealized net capital gains** totaled \$1.82 billion as of September 30, 2013 compared to \$3.70 billion as of December 31, 2012. The decline from December 31, 2012 was primarily due to increasing risk-free interest rates. The following table presents unrealized net capital gains and losses.

(\$ in millions)		September 30, 2013	December 31, 2012

The unrealized net capital gains for the fixed income portfolio totaled \$1.54 billion and comprised \$1.93 billion of gross unrealized gains and \$392 million of gross unrealized losses as of September 30, 2013. This is compared to unrealized net capital gains for the fixed income portfolio totaling \$3.68 billion, comprised of \$4.11 billion of gross unrealized gains and \$426 million of gross unrealized losses as of December 31, 2012.

Gross unrealized gains and losses on fixed income securities by type and sector as of September 30, 2013 are provided in the following table.

Redeemable preferred stock		15		2				17
Total fixed income securities	\$	27,796	\$	1,931	\$	(392)	\$	29,335

The utilities, banking and consumer goods sectors had the highest concentration of gross unrealized losses in our corporate fixed income securities portfolio as of September 30, 2013. In general, the gross unrealized losses are principally related to increasing risk-free interest rates or widening credit spreads since the time of initial purchase.

The unrealized net capital gain for the equity portfolio totaled \$47 million and comprised \$52 million of gross unrealized gains and \$5 million of gross unrealized losses as of September 30, 2013. This is compared to an unrealized net capital gain for the equity portfolio totaling \$35 million, comprised of \$36 million of gross unrealized gains and \$1 million of gross unrealized losses as of December 31, 2012.

53

Net investment income The following table presents net investment income.

(\$ in millions) Three months ended Nine months ended

	September 30,			Septe	30,		
		2013		2012	2013		2012
Fixed income securities	\$	487	\$	521	\$ 1,477	\$	1,567
Mortgage loans		91		86	269		256
Equity securities		3		2	8		5
Limited partnership interests		37		11	104		117
Short-term investments				1	1		1
Policy loans		12		13	36		39
Other		18		16	50		46
Investment income, before expense		648		650	1,945		2,031
Investment expense		(27)		(29)	(84)		(87)
Net investment income	\$	621	\$	621	\$ 1,861	\$	1,944

Net investment income in the third quarter of 2013 was comparable to the same period of 2012. Net investment income decreased 4.3% or \$83 million in the first nine months of 2013 compared to the same period of 2012 primarily due to lower average investment balances and lower limited partnership income, partially offset by higher prepayment fee income and litigation proceeds. Net investment income in the third quarter of 2013 includes \$140 million relating to investments classified as held for sale.

Realized capital gains and losses The following table presents the components of realized capital gains and losses and the related tax effect.

(\$ in millions)	Three months ended September 30,				Nine months ended September 30,		
		2013	2012	_	2013		2012
Impairment write-downs	\$	(10)	\$ (12)	\$	(28)	\$	(38)
Change in intent write-downs		(7)	(1)		(15)		(17)
Net other-than-temporary impairment losses				_			
recognized in earnings		(17)	(13)		(43)		(55)
Sales		6	(52)		90		(52)
Valuation of derivative instruments		(5)	(3)		(3)		(6)
Settlements of derivative instruments			11		17		41
Realized capital gains and losses, pre-tax		(16)	(57)	_	61		(72)
Income tax benefit (expense)		4	20		(23)		25
Realized capital gains and losses, after-tax	\$	(12)	\$ (37)	\$	38	\$	(47)

Impairment write-downs, which includes changes in the mortgage loan valuation allowance, are presented in the following table.

(\$ in millions)		Three months ended September 30,			Nine mo Septe		
	<u></u>	2013	2012		2013	2012	
Fixed income securities	\$	(2) \$	(9)	\$	(31)	\$ (39)	
Mortgage loans		(6)	(1)		11	3	
Limited partnership interests		(1)			(5)	(2)	
Other investments		(1)	(2)		(3)		
Impairment write-downs	\$	(10) \$	(12)	\$	(28)	\$ (38)	

Impairment write-downs on fixed income securities for the three months and nine months ended September 30, 2013 were primarily driven by CMBS that experienced deterioration in expected cash flows. The valuation allowance on mortgage loans as of September 30, 2013 decreased compared to December 31, 2012 due to increases in the fair value of the collateral less costs to sell for certain previously impaired loans.

Change in intent write-downs totaling \$7 million in the three months ended September 30, 2013 were primarily related to the repositioning and ongoing portfolio management of our equity securities. Change in intent write-downs totaling \$15 million in the nine months ended September 30, 2013 were primarily a result of plans to reduce

54

holdings of ARS backed by student loans and the repositioning and ongoing portfolio management of our equity securities.

Sales generated \$6 million and \$90 million of net realized capital gains in the three months and nine months ended September 30, 2013, respectively, primarily related to sales of fixed income and equity securities in connection with portfolio repositioning.

Valuation and settlements of derivative instruments generated net realized capital losses of \$5 million for the three months ended September 30, 2013, primarily composed of losses on credit default swaps due to the widening of credit spreads on the underlying credit names and losses on foreign currency contracts due to the weakening of the U.S. currency to the foreign currency. Valuation and settlements of derivative instruments generated net realized capital gains of \$14 million for the nine months ended September 30, 2013, primarily composed of gains on credit default swaps due to the tightening of credit spreads on the underlying credit names.

CAPITAL RESOURCES AND LIQUIDITY

Capital resources consist of shareholder's equity and notes due to related parties, representing funds deployed or available to be deployed to support business operations. The following table summarizes our capital resources.

(\$ in millions) September 30, December 31,

	2013	2012
Common stock, retained income and additional capital paid-in	\$ 5,545	\$ 5,680
Accumulated other comprehensive income	1,052	1,633
Total shareholder's equity	 6,597	 7,313
Notes due to related parties	286	496
Total capital resources	\$ 6,883	\$ 7,809

Shareholder's equity decreased in the first nine months of 2013, primarily due to decreased unrealized net capital gains on investments and the net loss.

Financial ratings and strength Our ratings are influenced by many factors including our operating and financial performance, asset quality, liquidity, asset/liability management, overall portfolio mix, financial leverage (i.e., debt), exposure to risks, the current level of operating leverage and AIC's ratings. In January 2013, A.M. Best affirmed our financial strength rating of A+ and the outlook for the rating remained stable. In April 2013, Moody's affirmed our financial strength rating of A1 and the outlook for the rating was revised to stable from negative. In May 2013, S&P affirmed our financial strength rating of A+ and the outlook for the rating was revised to stable from negative. In the future, if our financial position is less than rating agency expectations including those related to capitalization at the parent company, AIC or the Company, we could be exposed to a downgrade in our ratings which we do not view as being material to our business model or strategies.

The sale of LBL is expected to generate deployable capital of approximately \$1 billion, which will be returned to AIC as allowed by regulatory dividend limitations and approvals. The \$1 billion includes the estimated gain on the sale on a statutory-basis of accounting in the range of approximately \$350 million to \$400 million and the release of risk-based capital. Subsequent to the announcement of the planned sale of LBL, the rating agencies initiated reviews of LBL's ratings and outlook. Moody's downgraded LBL from A1 to Baa1 and revised the rating outlook from stable to negative. Both the rating and outlook will be finalized after the transaction closes. S&P downgraded LBL from A+ to BBB+ and placed LBL on CreditWatch negative. Both the rating and CreditWatch will be finalized after the transaction closes. A.M. Best placed LBL's rating under review with negative implications, pending a final determination on both the rating and outlook after the transaction closes. The Moody's, S&P and A.M. Best ratings and outlook of Allstate Life Insurance Company ("ALIC") are unaffected by the sale of LBL.

The Company, AIC and the Corporation are party to the Amended and Restated Intercompany Liquidity Agreement ("Liquidity Agreement") which allows for short-term advances of funds to be made between parties for liquidity and other general corporate purposes. The Liquidity Agreement does not establish a commitment to advance funds on the part of any party. The Company and AIC each serve as a lender and borrower and the Corporation serves only as a lender. The Company also has a capital support agreement with AIC. Under the capital support agreement, AIC is committed to provide capital to the Company to maintain an adequate capital level. The maximum amount of potential funding under each of these agreements is \$1.00 billion.

55

In addition to the Liquidity Agreement, the Company also has an intercompany loan agreement with the Corporation. The amount of intercompany loans available to the Company is at the discretion of the Corporation. The maximum amount of loans the Corporation will have outstanding to all its eligible subsidiaries at any given point in time is limited to \$1.00 billion. The Corporation may use commercial paper borrowings, bank lines of credit and securities lending to fund intercompany borrowings.

Liquidity sources and uses We actively manage our financial position and liquidity levels in light of changing market, economic, and business conditions. Liquidity is managed at both the entity and enterprise level across the Company, and is assessed on both base and stressed level liquidity needs. We believe we have sufficient liquidity to meet these needs. Additionally, we have existing intercompany agreements in place that facilitate liquidity management across the Company to enhance flexibility.

Allstate parent company capital capacity The Corporation has at the parent holding company level deployable assets totaling \$2.83 billion as of September 30, 2013. These assets include cash and investments that are generally saleable within one quarter totaling \$2.21 billion. This provides funds for the parent company's relatively low fixed charges and other corporate purposes.

The Company has access to additional borrowing to support liquidity through the Corporation as follows:

- A commercial paper facility with a borrowing limit of \$1.00 billion to cover short-term cash needs. As of September 30, 2013, there were no balances outstanding and therefore the remaining borrowing capacity was \$1.00 billion; however, the outstanding balance can fluctuate daily.
- A \$1.00 billion unsecured revolving credit facility is available for short-term liquidity requirements and backs the commercial paper facility. The Corporation has the option to extend the expiration of its initial five year term by one year at the first and second anniversary of the facility, upon approval of existing or replacement lenders. In April 2013, the Corporation utilized the option on the first anniversary of the facility and extended the facility by one year making its current expiration April 2018. The facility is fully subscribed among 12 lenders with the largest commitment being \$115 million. The commitments of the lenders are several and no lender is responsible for any other lender's commitment if such lender fails to make a loan under the facility. This facility contains an increase provision that would allow up to an additional \$500 million of borrowing. This facility has a financial covenant requiring that the Corporation not exceed a 37.5% debt to capitalization ratio as defined in the agreement. This ratio was 15.8% as of September 30, 2013. Although the right to borrow under the facility is not subject to a minimum rating requirement, the costs of maintaining the facility and borrowing under it are based on the ratings of the Corporation's senior unsecured, unguaranteed long-term debt. There were no borrowings under the credit facility during the third quarter and first nine months of 2013. The total amount outstanding at any point in time under the combination of the commercial paper program and the credit facility cannot exceed the amount that can be borrowed under the credit facility.
- A universal shelf registration statement was filed by the Corporation with the Securities and Exchange Commission on April 30, 2012. The Corporation can use this shelf registration to issue an unspecified amount of debt securities, common stock (including 444 million shares of treasury stock as of September 30, 2013), preferred stock, depositary shares, warrants, stock purchase contracts, stock purchase units and securities of trust subsidiaries. The specific terms of any securities the Corporation issues under this registration statement will be provided in the applicable prospectus supplements.

Dividend limitations During 2013, ALIC will not be able to pay dividends to AIC without prior IL DOI approval. ALIC will be able to pay dividends without prior IL DOI approval when its unassigned surplus excluding unrealized appreciation from investments becomes positive. The sale of LBL is expected to reduce the deficit in the range of approximately \$425 million to \$475 million. ALIC also can repurchase its shares and return capital to AIC with the approval of the IL DOI.

Liquidity exposure Contractholder funds were \$23.78 billion as of September 30, 2013. The following table summarizes contractholder funds by their contractual withdrawal provisions as of September 30, 2013.

(\$ in millions)		Percent
		to total
Not subject to discretionary withdrawal	\$ 3,836	16.1%
Subject to discretionary withdrawal with adjustments:		
Specified surrender charges (1)	6,871	28.9
Market value adjustments (2)	3,354	14.1
Subject to discretionary withdrawal without adjustments (3)	9,718	40.9
Total contractholder funds (4)	\$ 23,779	100.0%

⁽¹⁾ Includes \$3.48 billion of liabilities with a contractual surrender charge of less than 5% of the account balance.

(3) 78% of these contracts have a minimum interest crediting rate guarantee of 3% or higher.

Retail life and annuity products may be surrendered by customers for a variety of reasons. Reasons unique to individual customers include a current or unexpected need for cash or a change in life insurance coverage needs. Other key factors that may impact the likelihood of customer surrender include the level of the contract surrender charge, the length of time the contract has been in force, distribution channel, market interest rates, equity market conditions and potential tax implications. In addition, the propensity for retail life insurance policies to lapse is lower than it is for fixed annuities because of the need for the insured to be re-underwritten upon policy replacement. Surrenders and partial withdrawals for our retail annuities decreased 15.5% and 10.9% in the third quarter and first nine months of 2013, respectively, compared to the same periods of 2012. The annualized surrender and partial withdrawal rate on deferred fixed annuities and interest-sensitive life insurance products, based on the beginning of year contractholder funds, was 10.7% and 10.9% in the first nine months of 2013 and 2012, respectively. We strive to promptly pay customers who request cash surrenders; however, statutory regulations generally provide up to six months in most states to fulfill surrender requests.

Our asset-liability management practices enable us to manage the differences between the cash flows generated by our investment portfolio and the expected cash flow requirements of our life insurance and annuity product obligations.

Cash flows As reflected in our Condensed Consolidated Statements of Cash Flows, lower cash provided by operating cash flows in the first nine months of 2013 compared to the first nine months of 2012 was primarily due to lower net investment income, partially offset by lower contract benefits paid.

Higher cash provided by investing activities in the first nine months of 2013 compared to the first nine months of 2012 was due to higher investment collections and net transactional activity.

Higher cash used in financing activities in the first nine months of 2013 compared to the first nine months of 2012 was primarily due to a \$1.75 billion institutional product maturity.

57

Item 4. Controls and Procedures

Evaluation of Disclosure Controls and Procedures. We maintain disclosure controls and procedures as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934. Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our disclosure controls and procedures as of the end of the period covered by this report. Based upon this evaluation, the principal executive officer and the principal financial officer concluded that our disclosure controls and procedures are effective in providing reasonable assurance that material information required to be disclosed in our reports filed with or submitted to the Securities and Exchange Commission under the Securities Exchange Act is made known to management, including the principal executive officer and the principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Changes in Internal Control over Financial Reporting. During the fiscal quarter ended September 30, 2013, there have been no changes in our internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II. OTHER INFORMATION

Item 1. Legal Proceedings

Information required for Part II, Item 1 is incorporated by reference to the discussion under the heading "Regulation and Compliance" in Note 8 of the condensed consolidated financial statements in Part I, Item 1 of this Form 10-Q.

Item 1A. Risk Factors

This document contains "forward-looking statements" that anticipate results based on our estimates, assumptions and plans that are subject to uncertainty. These statements are made subject to the safe-harbor provisions of the Private Securities Litigation Reform Act of 1995. We assume no obligation to update any forward-looking statements as a result of new information or future events or developments.

These forward-looking statements do not relate strictly to historical or current facts and may be identified by their use of words like "plans," "seeks," "expects," "will," "should," "anticipates," "estimates," "intends," "believes," "likely," "targets" and other words with similar meanings. These statements may address, among other things, our strategy for growth, product development, investment results, regulatory approvals, market position, expenses, financial results, litigation and reserves. We believe that these statements are based on reasonable estimates, assumptions and plans. However, if the estimates, assumptions or plans underlying the forward-looking statements prove inaccurate or if other risks or uncertainties arise, actual results could differ materially from those communicated in these forward-looking statements. Risk factors which could cause actual results to differ materially from those suggested by such forward-looking statements include but are not limited to those discussed or identified in this document, in our public filings with the Securities and Exchange Commission, and those incorporated by reference in Part I, Item 1A of the Allstate Life Insurance Company Annual Report on Form 10-K for 2012.

Item 6. Exhibits

^{(2) \$3.94} billion of the contracts with market value adjusted surrenders have a 30-45 day period at the end of their initial and subsequent interest rate guarantee periods (which are typically 5 or 6 years) during which there is no surrender charge or market value adjustment.

⁽⁴⁾ Includes \$991 million of contractholder funds on variable annuities reinsured to The Prudential Insurance Company of America, a subsidiary of Prudential Financial Inc., in 2006.
